Cap-Level® II is an excellent choice for level monitoring and control. The "industry standard" 4-20mA output is provided with a selectable dampening function to stabilize readings where severe agitation is present. Simple zero and span adjustment make calibration easy.

The relay logic circuitry offers the flexibility to control multiple pumps, conveyors and alarms. Each relay can be set to turn your equipment on and off at any selected point on the probe - without any external latching devices. Failsafe selection gives the security of fault indication and/or conveyor stop if power is lost.

The probe configurations and materials offered allow you to custom fit Cap-Level® II to your application. Designs such as the type “E” and type “H” tie-down, allow use in tall silos and include a unique cable adjustments.
