Features

- Stable operation that eliminates hunting and buzzing.
- Flow compensation provided by venturi action of the aspirator tube.
- Indirect operation provided by the action of a separate pilot valve and valve motor to eliminate unbalanced closing forces in inner valve assembly.
- Large correcting effect due to the sensitive pilot valve action that maintains constant pressure drop across the supply valve to assure immunity to supply pressure variations.
- No-Bleed design minimizes consumption of air or inert gas.
- Compact in size where space is limited.

Operating Principles

The Model 1000 Precision Pressure Regulator is designed for use in systems requiring both precision control and high forward flow and exhaust capacity. The sensitive valve motor of this high quality unit makes it virtually immune to supply pressure variations.

The combination of high flow capacity and good sensitivity make the versatile control applications, including loading of control valve and calendar roll actuators, operation of clutch and braking devices, and winding operations.
Technical Information

Specifications

Flow Capacity
50 SCFM (85 m³/HR) (100 psig, [7.0 BAR], (700 kPa) supply, 20 psig, [1.5 BAR], (150 kPa) setpoint)

Exhaust Capacity
8 SCFM (13.6 m³/HR) for downstream pressure 5 psig, [0.35 BAR], (35 kPa) above set pressure

Supply Pressure
250 psig, [17.0 BAR], (1700 kPa) Maximum

Effect of Supply Pressure Variation
0.1 psig, [.007 BAR], (.7 kPa) per 100 psig, [7.0 BAR], (700 kPa) change

Sensitivity
0.5” (1.27 cm) Water Column

Ambient Temperature Limits
-40°F to +200°F, (-40°C to +93.3°C)

Hazardous Locations
Acceptable for use in Zones 1 and 2 for gas atmosphere; Groups IIA and IIB and Zones 21 and 22 for dust atmospheres

Materials of Construction
Body ..................................... Zinc
Diaphragms .......................... Buna N and Dacron
Trim ................................. Aluminum, Brass, Neoprene and Zinc Plated Steel
