Product Introduction Overview

This document provides information relating to the components that comprise the XYR3000 Wireless Family of Multiplexer I/O, Gateway’s and Extensions. The XYR3000 I/O Modules include models XYR3001, XYR3002, and XYR300L. All modules in the XYR3000 series include the same flexible and reliable operating protocol. Different versions will operate together in the one system. Each module provides different combinations of the following I/O:

- Digital inputs for switch devices such as limit switches, level switches, security sensors, motor starters, pushbuttons, analog inputs (0-10 / 0-20 / 4-20mA) for connecting transducers which measure parameters such as level, flow, pressure, temperature, vibration
- Digital output contacts for controlling devices such as motor drives, lights, alarms
- Analog outputs (0-10 / 0-20 / 4-20mA) for connection to meters or indicators to display measured parameters.
- Pulse inputs and outputs for transmitting pulse signals from flow meters, energy meters etc.

Attributes

- RF: 902-928 Mhz ISM band, FHSS
- Transmit radio power: 1 Watt
- Powering options: 110/220/24V, solar, Battery
- Range: 20 Miles LOS
- Diagnostics: Low Battery
- Event Driven Transmission Rates
- Local and Software Configurable
- 1 sec to 1 min transmit rate
- RSSI and Link test
- CRC check on all data
- Wire In Wire out and Wire in digital out possible

Applications

- Tank level monitoring
- Condition monitoring of equipment
- Utility plant alarms
- Effluent treatment plants
- Security and access-control
- Remote water pumps
- Monitoring of fire-fighting and safety systems
- Gas detection systems
Product Introduction Overview.. continued

The XYR3000 Wireless gateway products provide a wireless interface between various data buses used in process and automation applications. The Gateway includes an integral 900MHz license-free radio transceiver, and transfers transducer and control signals (I/O) using the highly secure and highly reliable WIB-smart radio protocol. The XYR300G-E can handle multiple applications simultaneously.

Other Gateway features are:

- High security data encryption
- Automatic acknowledgment and error-correction,
- Peer to peer addressing, and
- Multiple path routing

The XYR300D Wireless modems provide RS232, RS485 connections by radio. The XYR300E and XYR401E are ideal solutions for Ethernet and serial connections in process control and automation applications (PLC’s, DCS, SCADA, data acquisition, wireless video).

The XYR401E Wireless Modem is 802.11b/g compliant (2.4GHz license free frequency band) with a data rate of 108Mbps.

Wireless I/O Extensions lets you add your choice of I/O to XYR3001 and XYR3002 units.

Components

The XYR3000 Wireless Family consists of:

Field Mountable Multiplexer I/O’s Modules
- XYR3001: 4DI, 4DO, 2AI, 2AO, 1PI/O
- XYR3002: 4DI, 1DO, 6AI, 4PI
- XYR300L: AI, 2DI, T/C

Gateways
- XYR300G-M: Modbus Gateway
- XYR300G-E: Ethernet Gateway

Modems
- XYR300D: Wireless Serial Radio Modem
- XYR300E: Wireless Ethernet Modem
- XYR401E: WiFi Wireless Ethernet Modem

I/O Extension Units
- XYR3011: 16DI, 16DO, 2PI, 4PO
- XYR3012: 8DI, 8DO, 8AI
- XYR3013: 8DI, 8DO, 8AO
Field Mountable Multiplexer I/O’s Modules

Introduction
The XYR3000 Family range of telemetry modules provide remote monitoring and control by radio or twisted-pair wire, over short or long distances. Transducer signals connected at one module (input signals) are transmitted to another module where the signals are re-created as output signals, or passed via RS232/485 to a host device such as a PLC or SCADA system.

Radio Communications
The XYR3000 I/O Modules use frequency-hopping spread spectrum and operates on the license-free 900MHz band. These products can be used without a radio license.

Radio Range
The operating radio range of the XYR3000 Series depends on obstructions in the radio path, the height above ground of the antennas, and the type of antennas used. Typical line-of-site ranges are:

- 20+ miles in USA/Canada
- 20 km in Australia/NZ

Longer distances may be achieved depending on local conditions.

The XYR3000 Series provides a measurement of both radio channel noise and radio signal strength to assist with installation and testing. Each XYR3000 also provides a repeater function. A module may be configured to retransmit a message on to a remote module which does not have a reliable radio path.

The repeater acts as an intermediate module between the two ends of the radio link. Messages may be repeated up to five times by intermediate repeater units, allowing very long radio paths to be achieved. Repeaters can also have their own I/O.

Configuration
The XYR3001 and XYR3002 modules are easy to configure, by connecting a PC to the module serial port and downloading a configuration file. Configuration software is provided with the modules. Configuration files may be uploaded from the modules for modification or archiving.

The XYR300L module can be configured via the serial port. Unidirectional units can be configured to network with Multi-I/O and Gateway units.

Diagnostics, Testing
The XYR3001 and XYR3002 modules provide diagnostic and test functions by connecting a PC terminal to the module. I/O and communication functions may be tested. The 905U module includes a radio strength measurement, which provides an indication of background noise and received radio strength. This feature allows radio paths to be tested without any additional test equipment.

The XYR300L Diagnostic features include:
Read input values, Write output values, Radio signal strength, Monitor communication messages.

Analog I/O
The XYR3001 modules have two inputs which will accept 4–20mA analog signals. One of these inputs has adjustable setpoints for controlling a digital output.

The XYR3002 modules have six inputs which will accept 0–20mA analog signals. Because of the inputs’ high resolution, they may be used for 4–20mA signals or 0–10mA.

The XYR300L modules have one input which will accept 0–20mA (4-20mA, 0-10mA) / 0-5V analog signals. Each analog input has adjustable setpoints for controlling digital outputs.

Analog Setpoints
The XYR3001 and XYR3002 High and low setpoints may be configured for the analog inputs to control a remote digital output contact.

The digital output will set (“on”) when the analog input value drops below the low setpoint and will reset (“off”) when the analog value exceeds the high setpoint.

The XYR300L High and low setpoints generate internal digital status. The setpoint status will set (“on”) when the analog value drops below the low setpoint and will reset (“off”) when the analog value exceeds the high setpoint.

Status transmitted as per digital input.

Setpoint values can be set via the front panel rotary switch or configuration software.

XYR3000 Wireless Gateways

Introduction
The XYR300G Wireless gateway products provide a wireless interface between various data buses used in process and automation applications. The gateway includes an integral 900MHz license-free radio transceiver, and transfers transducer and control signals (I/O) using the highly secure and highly reliable WiB-smart radio protocol.

The WiB-smart radio protocol is designed for very efficient radio usage, with configurable communications based on event reporting (I/O change), update times and/or poll response. Other features are:
  - High security data encryption
  - Automatic acknowledgment and error-correction
  - Peer to peer addressing
  - Multiple path routing

Applications
Used for Wire in Digital out configuration.
900MHz, FHSS, 1 Watt strength LOS 20 miles.
High security data encryption on the wireless link.
Interface between PLC’s, DCS, HMI or SCADA and XYR 3000 wireless I/O units.
Supports WiBnet, peer to peer addressing and multi hop routing.
Has 8, on board discrete I/O which can be individually configured as inputs or outputs.
Radio communication supports event reporting, update time, read/write blocks and poll response.
Message acknowledgements and up to 4 retransmissions supported for each gateway.

Modbus Gateway (XYR300G-M):
High capacity Modbus gateway that supports up to 4300 I/O points
- Modbus RTU, Master slave configuration, 300-19.2 kbits/sec

Ethernet Gateway (XYR300G-E):
10/100 Mbits/sec
- Modbus TCP class 0/1 and Ethernet IP level 2 I/O server

Radio Transmission
Radio communications can be configured for combination of event reporting (change-of-value), update time, read/write blocks and poll response.
Radio message includes system addressing, unit addressing, error-checking and configurable security encryption.
Communication control includes message acknowledgments and up to four re-transmissions.
Peer to peer addressing. Messages may be routed thru four intermediate repeater addresses.
Fail-to-transmit and fail-to-receive alarms configurable

Configuration and Diagnostics
The XYR300G -M and XYR300G-E can be configured using free Windows software
Diagnostics include on-line read/write of I/O registers, radio signal strength values from remote units, and off-line testing of data bus protocol.

XYR3000 Wireless Modems

XYR300D
The XYR300D Wireless Serial Radio Modem product provides RS232 or RS485 connections by radio. It is a low cost wireless alternative for linking PLC data loggers, supervisory computers, and intelligent transducers.
The XYR300D has been designed to be easy to use and simple to install. It uses a 900MHz spread spectrum radio which does not require a radio license in many countries.
The Module is fully integrated with radio, power supply, serial ports and microprocessor controller housed in a strong industrial aluminum case.

XYR300E/301E
The XYR300E Wireless Ethernet Modem product is an ideal solution for Ethernet and serial connections in process control and automation applications – PLC’s, DCS, SCADA, data acquisition, wireless video. The XYR300E can handle multiple applications simultaneously.
The XYR300E uses the license-free 902-928MHz FHSS communications band and supports data communications to 115.2 Kbps.
The XYR301E uses the license-free 902-928MHz DSSS communications band and supports data communications to 54.2 Mbps.
The XYR301E has an Ethernet port [10/100 BaseT] as well as two serial ports [RS232 and RS485] – up to three independent data-bus connections simultaneously … serial to serial, serial to Ethernet, point to multipoint, Modbus serial to Modbus TCP conversion.

XYR401E
The XYR401E WiFi Wireless Ethernet Modem product provides reliable and secure high speed wireless Ethernet connectivity across a broad range of applications in process and automation plants – PLC’s, HMI, DCS, data acquisition, video devices and industrial PC’s.
The XYR401E has an Ethernet port [10/100 BaseT] as well as two serial ports [RS232 and RS485] – up to three independent data-bus connections simultaneously … Ethernet to Ethernet, serial to serial, serial to Ethernet, point to multipoint, Modbus serial to Modbus TCP conversion.

Configuration and Diagnostics

XYR300D
Configuration by freeware software package or by Hayes AT commands. Radio noise, signal strength and bit error rate [BER] diagnostics included. Radio signal strength value available on-line to host device.

XYR300E/301E
Configuration and diagnostics via the web-browser.
Remote configuration and diagnostics via the wireless link.

XYR401E
HTTP with remote configuration via wireless link Web based system management – RF signal strength, Bit Error Rate [BER], connection monitoring and statistics.
PPP Protocol Access to diagnostics
Firmware upgradeable via serial port.

XYR3000 I/O Extensions

Introduction
The Expansion I/O for XYR3000 wireless can be added to XYR3001 and XYR3002 series. Using the RS485 Serial port for configuration, you have your choice of I/O:

I/O Extension Units
XYR3011: 16DI, 16DO, 2PI, 4PO
XYR3012: 8DI, 8DO, 8AI
XYR3013: 8DI, 8DO, 8AO

Typical applications
Expansion I/O for XYR3000 wireless units – up to 31 units can be connected to each wireless unit via RS485.
Serial I/O multiplexer – transfer I/O via RS485 – up to 32 units per multi-drop link.
Expansion I/O for Modbus devices – up to 31 units can be connected to each Modbus master via RS485.

Features
• Multi I/O channels - monitoring and control functions.
• Connected via RS485 multi-drop.
• Selectable communications via WIB-net or Modbus protocol (bothRTU and ASCII formats).
• Sensor signals connected at one module (input signals) are transmitted to another module where the signals are re-created as output signals, or passed via serial or Ethernet data bus to a host device such as a PLC or SCADA system.
• Connect to XYR3000 wireless I/O units for I/O expansion – up to 31 serial addresses per wireless unit.
• Connect XYR3011, 3012, and 3013 units together to form a serial multi-drop I/O system - up to 32 serial addresses per multi-drop link – no Master device is required to control communications.
• Connect up to 99 XYR3011, 3012, 3013 units as multi-drop Modbus I/O (RS485 extenders/isolators required for more than 31 units per single multi-drop length).
• RS485 multi-drop up to 2 km (1 mile) depending on installation environment.
• Three I/O versions available.
• WIB-net intelligent wireless protocol; Peer-to-peer communications; Exception reporting; Reliable self-checking messages. Any input on any unit can be linked to any output on any unit. Inputs can be linked to multiple outputs. Serial communications 9.6Kb/s.

• Alternate Modbus RTU or Modbus ASCII slave protocol, serial communications configurable up to 115.2Kb/s, 7 or 8 data bit format.
• External I/O plus internally calculated values – analog setpoint status, pulse rate and pulse total, power supply voltage, power supply alarm.

Inputs and Outputs
Digital Inputs
Suitable for voltage free contacts or NPN transistor, contact wetting current 5mA, inputs are surge protected type -11 up to 16 selectable I/O type -12 & -13 up to 8 selectable I/O.

Digital Outputs
FET outputs, 30VDC 200mA
type -11 up to 16 selectable I/O
type -12 & -13 up to 8 selectable I/O

Analog Inputs
“Floating” differential inputs; common mode voltage 27V, 24VDC for powering external loops provided; digital filtering 1 sec.
0-20mA/0-10V resolution 12 bit, accuracy 0.1%
type -12 8 input channels, selectable as 4 dual-terminal floating inputs or 8 single-terminal common inputs.

Analog Outputs
Selectable as current/voltage source or current sink to common; max loop voltage 27V; max loop resistance 1000 ohms; 0 – 20mA/ 0 – 10V; 12 bit, accuracy 0.1%
type -13 8 channels

Pulse Inputs
Specifications as per digital inputs Max pulse rate 1kHz; pulse width min 0.5ms
type -11 4 inputs (DIO1-4)

Pulse Outputs
Specifications as per digital outputs Max pulse rate 15.625Hz; pulse width min 32ms type -11,-12,-13 8 outputs (DIO1-8)
