This document and the information contained herein are confidential to and the property of Honeywell, Inc. and are made available only to Honeywell employees for the sole purpose of conducting Honeywell’s business. This document, and any copy thereof, and the information contained herein shall be maintained in strictest confidence; shall not be copied in whole or in part except as authorized by the employee's manager; and shall not be disclosed or distributed (a) to persons who are not Honeywell employees, or (b) to Honeywell employees for whom such information is not necessary in connection with their assigned responsibilities. Upon request, or when the employee in possession of this document no longer has need for this document for the authorized Honeywell purpose, this document and any copies thereof shall be returned to the employee's manager. There shall be no exceptions to the terms and conditions set forth herein except as authorized in writing by the responsible Honeywell Vice President.

⚠️ WARNING
PERSONAL INJURY
• DO NOT USE these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury. Failure to comply with these instructions could result in death or serious injury.

The latest copy of this installation guide and other documentation associated to the WCX Series XYR 6000 Wireless Valve Position Sensor is available at:

1 DESIGNATION, SCOPE AND PREFACE

1.1 Designation

This document is valid for all OneWireless™ XYR6000 WCX Series transmitters, which feature a DSSS transmitter.

1.2 Scope

This document outlines professional installation requirements for the Honeywell WCX Series valve position sensor for the Honeywell OneWireless™ Network. Professional installation is required to comply with certification agency and legal requirements. This document must be adhered to for all installations of the Honeywell OneWireless™ WCX Series sensors.

1.3 Preface

This manual covers professional installation of the Honeywell OneWireless™ WCX Series valve position sensors. See the Getting Started with Honeywell OneWireless™, Honeywell OneWireless™ Planning Guide and Honeywell OneWireless™ XYR6000 WCX Series Valve Position Sensor User’s Guides for general information on overall system implementation, configuration, and management of these devices.

Since these devices may require that the Transmit (TX) power limit settings for the higher gain antennas be manually adjusted, the WCX Series sensor is classified by the FCC as a device that must be professionally installed. To be in compliance with FCC requirements, the radio must be installed with one of approved antennas listed in this document.

1.4 Site Survey

It is assumed for the purposes of this document that a site survey has been performed and that the antenna types, cable lengths and lightning surge arrestors were appropriately selected per the results of that survey. Any changes to these items as a result of the actual installation of the WCX Series XYR 6000 valve position sensors into the site may require that the TX power setting of the radio board needs to be adjusted from the factory setting in order to maintain agency approvals. See Sections 10 and 11 for more information.
1.5 Abbreviations & Definitions

The term **WCX Series valve position sensor** will be used to describe the composite unit which includes the Honeywell DSSS RF module and all subassemblies housed within the XYR 6000 WCX Series valve position sensor enclosure.

2 FEDERAL COMMUNICATION COMMISSION (FCC)

2.1 FCC Compliance Statements

- This device complies with Part 15 of FCC Rules and Regulations. Operation is subject to the following two conditions: (1) This device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

- This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radiofrequency energy and, if not installed and used in accordance with these instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

- Intentional or unintentional changes or modifications must not be made to the WCX Series sensor unless under the express consent of the party responsible for compliance. Any such modifications could void the user’s authority to operate the equipment and will void the manufacturer’s warranty.

3 INDUSTRY CANADA (IC)

3.1 IC Compliance Statements

- To reduce potential radio interference to other users, the antenna type and its gain should be chosen so that the equivalent isotropic radiated power (EIRP) is not more than that permitted for successful communication.

- Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

- This Class A digital apparatus has been tested and found to comply with Canadian ICES-003.

- French: Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

4 RF Safety Statement:

To comply with FCC's and Industry Canada's RF exposure requirements, the following antenna installation and device operating configurations must be satisfied.

- Remote point-to-multi-point antenna(s) for this unit must be fixed and mounted on outdoor permanent structures with a separation distance between the antenna(s) of greater than 20cm and a separation distance of at least 20 cm [7.87 in] from all persons.

- Furthermore, when using integral antenna(s) the WCX Series sensor unit must not be co-located with any other antenna or transmitter device and have a separation distance of at least 20 cm [7.87 in] from all persons.
5  FCC and Industry Canada (IC) Identification Numbers:

5.1  DSSS Radios

- Honeywell XYR 6000 WCX Series valve position sensor DSSS radio module identification
  - Honeywell identification for intrinsically safe RF modules: 50025034-001

- Honeywell XYR 6000 WCX Series valve position sensor DSSS Radio Limited modular Approval
  - Federal Communication Commission identification for intrinsically safe RF modules: S5750025034
  - Industry Canada identification for intrinsically safe RF modules: 573I-50025034

This information is shown on the label attached to each RF Module.

7  WCX SERIES XYR 6000 VALVE POSITION SENSORS GENERAL DESCRIPTION

7.1  Intended Use

The WCX Transmitter is a key component of the Honeywell Wireless Network for Secure Industrial Application (WNSIA). These transmitters are available for various sensor types including digital inputs, temperature, high level analog inputs, pressure and corrosion. The WCX transmitter uses a low-powered FHSS or DSSS 2.4 GHz radio to communicate with Multinode and Gateway devices that are connected to a wired DCS network.

7.2  WCX Series XYR 6000 Valve Position Sensor Diagrams

Figure 1 shows unit-level drawings of the WCX Transmitter antenna options.

Figure 1. WCX Series XYR 6000 Valve Position Sensor

The WCX transmitter is available with either a 2 dBi straight or 2 dBi right angle integral antennas. The antennas are not replaceable or changeable in the field.
8 PRODUCT SPECIFICATIONS

8.1 Direct Sequence Spread Spectrum (DSSS) Radio, 2.4 GHz

**WARNING**
The WCX Transmitter must be professionally installed in accordance with the requirements specified in this document. See Section 10, for professional installation maximum TX power setting requirements. Only the specified TX power settings, antenna types and gains and cable lengths (attenuation) as outlined in this document are valid for WCX Series position sensor installations.

8.3 WCX Instrument Power Specifications

The WCX Series sensors operate from two (2) C-size 3.6 V Lithium batteries. These are joined in series to produce a maximum voltage of 7.6 Vdc.

8.4 Weight

The weight of the complete WCX Series sensor units is 2.04 kg [4.5 lb] maximum for Series WCX1X1, and is 5.03 kg [11.1 lb] maximum for Series WCX1X2. This weight includes integral antenna.
8.5 Dimensions

Figure 2. Dimensions of the WCX Series XYR 6000 valve position sensor
9 Equivalent Isotropically Radiated Power (EIRP)

In radio communication systems, Equivalent Isotropically Radiated Power (EIRP) or, alternatively, Effective Isotropic Radiated Power, is the amount of power that would have to be emitted by an isotropic antenna (that evenly distributes power in all directions and is a theoretical construct) to produce the peak power density observed in the direction of maximum antenna gain. EIRP can take into account the losses in transmission line and connectors and includes the gain of the antenna. The EIRP is often stated in terms of decibels over a reference power level that would be the power emitted by an isotropic radiator with an equivalent signal strength. The EIRP allows making comparisons between different emitters regardless of type, size or form. From the EIRP, and with knowledge of a real antenna’s gain, it is possible to calculate real power and field strength values.

\[
\text{EIRP(dBm)} = \text{Radio TX Power (dBm)} - \text{Cable Loss (dB)} + \text{Antenna Gain(dBi)}
\]

Antenna gain is expressed relative to a (theoretical) isotropic reference antenna (dBi).

</table>
Notes for Table 4:

1. The values in the above tables have been determined through agency certification testing.

2. The following shall apply for antenna type, frequency range, application/usage and agency/country compliance:
   - Antenna gains above the maximum values shown shall not be used.
   - Cable length/loss below the minimum values shown shall not be used.
   - Maximum overall radio output power shown shall not be exceeded.
   - Maximum EIRP values shown above shall not be exceeded.

3. **France** restricts outdoor use to 10mW (10 dBm) EIRP in the frequency range of 2,454 MHz to 2,483.5 MHz. Installations in France must limit EIRP to 10 dBm for operating modes utilizing frequencies in the range of 2,454 MHz to 2,483.5 MHz. For this reason, Honeywell does not recommend configuring frequency hopping modes that use this frequency range. **For installations in France, use only the following OneWireless™ Frequency Hopping (FH) Mode Selections:** EU Channel #1, EU Channel #7, NA/EU Guard Bands and NA/EU Channel 3 (FH Mode selections #4, 5, 8 and 10).

4. Industry Canada Compliance Statement: This device has been designed to operate with the antenna types listed in this document, and having a maximum gain of 14 dBi. Antenna types not included in this list or having a gain greater than 14 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 Ohm.

</tr>
</tbody>
</table>

Notes for Table 5:

1. The model number of any instrument may be found on the identification name plate located on the outside of the WCX Series sensor.

2. TX power is set by the Honeywell factory producing the WCX Series sensor to the values shown in the above tables. These factory values are determined by the customer’s model number selections in Table III for antenna type, cables and the lightning suppressor. If the cable lengths, antenna type or the use of a lightning surge arrestor are changed in the field away from the model number listed on the instrument, then the TX power setting should likewise be changed per the tables above to match the new antenna/cable/arrestor selections.

3. The TX power setting values represent the power produced by the radio circuit within the RF module. These TX power setting values do not include antenna gains nor do they include losses caused by cables, connectors and lightning arrestors. When these external gains and losses are included, using the TX power values ensures that the EIRP will not exceed the maximum limits as given in Table 4.
11 Setting TX Power

**WARNING**
The WCX Series valve position sensor must be professionally installed in accordance with the requirements specified in this document. Only the specified power settings, antenna types and gains and cable lengths (attenuation) as outlined in this document are valid for WCX Series valve position sensor installations.

TX power setting is accomplished with the authentication device when a special application (app) is installed. This app is considered to be Honeywell sensitive material and is made available only to the qualified professional installer.

When this app is installed in the AD, the WCX Series sensor TX power setting, normally a read-only parameter, becomes a read/write parameter.

Using the virtual keyboard in the device local configuration AD routine to manipulate the local user interface (LUI), navigate to the **TX_POWER** display in the **RADIO** setup group. The WCX Series sensor as shipped from the factory should show a TX power value consistent with those given in 0.

The TX power adjustment feature is provided for professional installers to adjust the WCX Series sensor TX power to match the specific selection of antenna and cables at the installation site and keep the total TX power under the regulatory thresholds.
12 Agency Label Information

The following information shall be clearly and permanently labeled on the WCX Series valve position sensor unit:

12.1 External FCC/IC Labels

50039279-001

```
THIS DEVICE COMPLIES WITH PART 15 OF THE FCC RULES. OPERATION IS SUBJECT TO THE FOLLOWING TWO CONDITIONS:
(1) THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE AND (2) THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED, INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRED OPERATION.
CONTAINS: FCC ID: S5750025034
CONTAINS: 50025034, IC: 573I-50025034
```

12.2 Internal FCC/IC Label

50021957-003

```
RF MOD 50025034-001
FCC ID: S5750025034
IC: 573I-50025034
```
13 RF Safety, Maximum Permissible Exposure (MPE) statement

To comply with FCC’s and Industry Canada’s RF exposure requirements, the following antenna installation and device operating configurations must be satisfied:

Remote antenna(s) for this unit must be fixed and mounted on outdoor permanent structures with a separation distance between the antenna(s) of at least 20 cm and a separation distance of at least 20 cm from all persons.

When using integral antenna(s) the WCX Series valve position sensor unit must not be co-located with any other antenna or transmitter device and have a separation distance of at least 20 cm [7.87 in] from all persons.

- **ANSI/ISA-61241-0 (12.10.02)-2006**: Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations – General Requirements
- **ISA-61241-1 (12.10.03)-2006**: Electrical Apparatus for Use in Zone 21 and Zone 22 Hazardous (Classified) Locations – Protection by Enclosures “tD”

14.2.2 European ATEX Certification (ATEX)

- **EN 60079-0**: Electrical Apparatus for Explosive Gas Atmospheres, Part 0: General Requirements
- **EN 60079-1**: Electrical Apparatus for Explosive Gas Atmospheres, Part 1: Flameproof Enclosures "d"
- **EN 60079-15**: Electrical Apparatus for Explosive Gas Atmospheres, Part 15: Electrical Apparatus with Type of Protection “n”
- **EN 50281**: Electrical Apparatus for Use in the Presence of Combustible Dust
- **EN 50284**: Special Requirements for Construction, Test and Marking of Electrical Apparatus of Equipment Group II, Category 1G
14.3 European Union Certification (CE-mark)

- Compliance with:
  - R&TTE Directive 1999/5/EC
  - EMC Directive 2004/108/EC
  - LVD Directive 2006/95/EC
  - ATEX Directive 94/9/EC

WARRANTY/REMEDY

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell’s standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. **The foregoing is buyer’s sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.**

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.
