### AMG-BY-III

**AutoMatrix™ Tee Connection Kit**

### Installation Instructions

#### Description
The AMG-BY-III is a copper free aluminum (maximum 4/10 of 1% copper) NEMA 4X(1) rated tee connection kit. The kit contains materials for one tee connection.

#### Tools Required
- Screwdriver
- Needle-nose pliers
- Utility knife
- Adjustable pliers
- Wire cutters
- 1/4" nut driver
- 3/8" nut driver
- Heat gun or mini-torch
- Crimp tool

#### Additional Materials Required
- Pipe straps
- GT-66 tape(3), Installation temp. above 40° F
- Grommets(3)
- GS-54 tape(3), Installation temp. above -40° F
- Terminal block assembly PN477219 is required for LBTV cable.

1. This type 4X enclosure is intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water. It is not suitable for use where subject to attack by alkalis.
2. May be required (see step 1).
3. Required for CSA Class I, II, III Division 2 Certification (see step 12)

#### Hazardous Locations
- **NEMA 4X**
  - Class I, Div. 2, Groups B, C, D
  - Class II, Div. 2, Groups F, G
  - Class III, Div. 2
- **TYPE 4X**
  - Class I, Div. 2, Groups A, B, C, D
  - Class II, Div. 2, Groups F, G
  - Class III, Div. 2

#### Installation Warning

- **WARNING:** This component is an electrical device which must be installed correctly to ensure proper operation and to prevent shock or fire. Read these important warnings and carefully follow all the installation instructions.
- To minimize the danger of fire from sustained electrical arcing if the heating cable is damaged or improperly installed, use a ground fault protection device (GFPD). Arcing may not be stopped by conventional circuit breakers.
- Component approvals and performance are based on the use of specified parts only. Do not use substitute parts or vinyl electrical tape.
- The black heating cable core and fibers are conductive and can short. They must be properly insulated and kept dry.
- Damaged bus wires can overheat or short. Do not break bus wire strands when scoring the jacket or core.
- Heat damaged components can short. Use a heat gun or a torch with a soft, yellow, low-heat flame, not a blue focused flame. Keep the flame moving to avoid overheating, blistering, or charring the heat-shrinkable tubes. Avoid heating other components. Replace any damaged parts.
- **WARNING:** Overheating heat-shrinkable tubes will produce fumes that may cause irritation. Use adequate ventilation and avoid charring or burning. Consult MSDS RAY/3122 for further information.
1. Identify heating cable type.
   - Select correct grommet from chart on right.

   *Order separately
   **Requires terminal block assembly PN477219 (order separately)

   **WARNING:** Use of the wrong grommet can result in leaks, cracked components, shock or fire, and will invalidate approvals and certifications.

2. Allow extra heating cable for service loop as shown. Not recommended for temperature sensitive fluids or pipes less than 1” dia.

3. Slide parts onto heating cables. (cables 1 and 2 are identical).

4. For base heating cables (no braid) skip to step 7.

   - Lightly score outer jacket.
   - Bend heating cable to break jacket at score, then peel off outer jacket.

5. For braided heating cables only.

   - Push braid back to create a pucker.
   - Open braid at pucker using screwdriver.

6. For braided heating cables only.

   - Bend heating cable and work it through opening in braid.

7. Do Not Cut Bus Wires

   - Lightly score base jacket.
   - Peel off base jacket.
1

Green/yellow for braid if present

Black

• Slide on heat-shrinkable tubes.
• Use heat gun or mini-torch with soft yellow flame to gently heat tubes until they shrink.

2

1/4"

• Notch core.
• Twist back and peel bus wire from core.
• Score core between bus wires at base jacket.
• Bend and snap core.
• Peel core free from bus wire.
• Clean bus wires.

3

Solid core heating cable.

• Center clear yellow tubing over end of base jacket.
• Heat tube until it shrinks and adhesive flows out ends. While still hot, pinch between bus wires and hold for 5 seconds to create a seal.
• Trim wire ends.

4

Fiber core heating cable.

• Cut and remove all fiber strands.
• Score and remove center spacer.
• Clean bus wires.

5

Solid core heating cable.

• Identify heating cable core type and continue as shown.

6

Continue here

7

Fiber core heating cable.

• Identify heating cable core type and continue as shown.

8

9

Solid core heating cable.

• Notch core.
• Twist back and peel bus wire from core.
• Score core between bus wires at base jacket.
• Bend and snap core.
• Peel core free from bus wire.
• Clean bus wires.

10

Continue here

11

3/8"

• Center clear yellow tubing over end of base jacket.
• Heat tube until it shrinks and adhesive flows out ends. While still hot, pinch between bus wires and hold for 5 seconds to create a seal.
• Trim wire ends.
12 For CSA Class I, II, III, Division 2 applications only.

- Apply 3 overlaps of glass tape (Raychem GT-66 or GS-54).

13

- For cables 1 and 2
  - Start pressure plate screws but do not tighten.
  - Pull heating cable thru base and position as shown.
  - Tighten screws.

14

- For cable 3
  - Position heating cable as shown.
  - Install and tighten gland screws.
  - Install flex tubing.

15

- Attach connection box base to pipe with pipe straps. Loop and tape extra heating cable to pipe.

16 For braided heating cable only.

- Trim ground braids to 1/4-inch and crimp on ring terminals.

17

- Install junction box over heating cables.
- Tighten screws.
Installation is complete.

18
• Position gasket onto gland and attach gland to box with locknut.
• Loop and tape heating cable 3 to pipe with GT-66 or GS-54 tape.
• Connect bus wires to terminal block.
• Connect braid wires to grounding post on terminal block bracket.

Note: Terminal block assembly PN477219 required for LBTV heating cable not shown.

19
• Position terminal block bracket into box. Slide into place and tighten screws.
• Place lid onto box and tighten screws.
