Level measurement of bulk solids
Guided microwave

VEGAFLEX 61
VEGAFLEX 62
VEGAFLEX 66

Product Information
Take note of safety instructions for Ex applications

Please note the Ex specific safety information which you can find on our homepage www.vega.com/services/downloads and which comes with every instrument. In hazardous areas you should take note of the appropriate regulations, conformity and type approval certificates of the sensors and power supply units. The sensors must only be operated on intrinsically safe circuits. The permissible electrical values are stated in the certificate.
1 Description of the measuring principle

Measuring principle
High frequency microwave impulses are guided along a steel cable or rod. When they reach the product surface, the microwave pulses are reflected back and received by the processing electronics. The running time is processed by the instrument.

A microprocessor identifies these level echoes, which are subsequently measured by the ECHOFOX software, evaluated and converted into level information.

Time-consuming adjustment with medium is not necessary. The instruments are preset to the ordered probe length. The shortenable cable and rod versions can be adapted individually to the local requirements.

Insensitive to dust
Even process conditions such as intense dust generation do not influence the measurement function.

Unaffected by material fluctuations
Density fluctuations or changes of the dielectric constant do not influence the function.

Buildup: no problem
Buildup or condensation on the probe or vessel wall do not influence the measuring result.

Wide application range
With measuring ranges up to 60 m (197 ft), the sensors are well suited for tall vessels. Temperatures up to 150 °C (302 °F) and pressures from vacuum up to 40 bar (580 psig) ensure a wide application range.

VEGAFLEX 66 is particularly suitable for the measurement of solids with high process temperatures. Its mechanical configuration was specially optimised for such applications. With these high temperature versions, process temperatures from -200° to +400° C (-328 ... +752 °F) and pressures up to 400 bar (5800 psig) are possible.

Insensitive to noise
VEGAFLEX sensors are insensitive to filling noise.

1.1 Application examples

Foodstuffs and animal feed

Cereals, sugar, flour, coffee, cornflakes, cacao, instant powder, animal feed - bulk solid levels must be measured everywhere in the food industry.

The guided microwave principle works independent of product characteristics such as moisture, intense dust or noise generation and the shape of the material cone.

Even very tall silos are no problem. Cable probes, also with PA coating, are available for different loads and in lengths up to 60 m (197 ft).

VEGAFLEX meets also the requirements of dust-Ex zone 20 (1/2 D).
Many finished products in the chemical industry are produced as powder, granules or pellets. The different and sometimes fluctuating product characteristics place heavy demands on the level measurement.

The measuring result is influenced neither by fluctuating product quality nor by dust generation or the shape of the material cone.

Even strong electrostatic discharges cannot harm VEGAFLEX 61.

Unaffected by product properties, the sensor delivers accurate, reproducible level data.

In the building industry, different additives are stored in single or multiple chamber silos - e.g. cement, sand, filler with varying properties such as moisture content, grain size, material cone shape and flow behavior.

The guided microwave is ideal for level measurement in vessels containing bulk solids. Due to the physical measuring principle, adjustment with medium is no longer necessary. The sensor only has to be electrically connected.

The measuring result is influenced neither by fluctuating product quality nor by dust generation, condensation or the shape of the material cone and therefore has a high reproducibility.

Cable probes are available for different lengths and loads. T ractive forces on the cable up to 3 tons (6000 lbs) are no problem for the stable VEGAFLEX 62.

The measurement is unaffected by product properties such as density, temperature, dielectric value and buildup. Because it is available in a wide range of versions, VEGAFLEX can also measure products such as e.g. light-weight fly ash or hot asphalt.
2 Type overview

VEGAFLEX 61 with cable measuring probe

Application: Bulk solids
Measuring range: 0.15 ... 32 m (0.492 ... 104.99 ft)
Process fitting: Thread, flange
Material: 316L and PCTFE, 316
Process temperature: -40 ... +150 °C (-40 ... +302 °F)
Process pressure: -1 ... 40 bar/-100 ... 4000 kPa (-14.5 ... 580 psi)
Signal output: 4 ... 20 mA/HART in two-wire, four-wire, Profinet PA, Foundation Fieldbus technology

VEGAFLEX 61 with rod measuring probe

Application: Bulk solids
Measuring range: 0.15 ... 4 m (0.492 ... 13.12 ft)
Process fitting: Thread, flange
Material: 316L and PCTFE, Hastelloy C22 (2.4602)
Process temperature: -40 ... +150 °C (-40 ... +302 °F)
Process pressure: -1 ... 40 bar/-100 ... 4000 kPa (-14.5 ... 580 psi)
Signal output: 4 ... 20 mA/HART in two-wire, four-wire, Profinet PA, Foundation Fieldbus technology

VEGAFLEX 62 with cable measuring probe

Application: Bulk solids
Measuring range: 0.15 ... 60 m (0.492 ... 196.86 ft)
Process fitting: Thread, flange
Material: 316L and PCTFE, 316
Process temperature: -40 ... +150 °C (-40 ... +302 °F)
Process pressure: -1 ... 40 bar/-100 ... 4000 kPa (-14.5 ... 580 psi)
Signal output: 4 ... 20 mA/HART in two-wire, four-wire, Profinet PA, Foundation Fieldbus technology

VEGAFLEX 62 with rod measuring probe

Application: Bulk solids
Measuring range: 0.15 ... 4 m (0.492 ... 13.12 ft)
Process fitting: Thread, flange
Material: 316L and PCTFE, Hastelloy C22 (2.4602)
Process temperature: -40 ... +150 °C (-40 ... +302 °F)
Process pressure: -1 ... 40 bar/-100 ... 4000 kPa (-14.5 ... 580 psi)
Signal output: 4 ... 20 mA/HART in two-wire, four-wire, Profinet PA, Foundation Fieldbus technology

3 Mounting instructions

Measuring range
The reference plane for the measuring range of the sensors is the sealing surface of the thread or flange.

![Fig. 4: Measuring range (operating range) and max. measuring distance]

Keep in mind that a min. distance must be maintained below the reference plane and possibly also at the end of the probe - measurement in these areas is not possible (dead band). Keep in mind that the cable length cannot be used all the way to the end because measurement in the area of the gravity weight is not possible. A possible overfilling however, is also detected reliably within the dead band.

These min. distances (dead zones) are specified in chapter "Technical data".

Installation position
Mount VEGAFLEX so that the probe does not touch any installations or the vessel wall during operation. If necessary, fasten the probe end.

When mounting the cable and rod versions of VEGAFLEX keep at least a distance of 300 mm (11.81 in) to other vessel installations or to the vessel wall.

If possible, mount the sensor flush with the vessel top. If this is not possible, use short sockets with small diameter.

In case of unfavourable mounting conditions such as e.g. very high (h > 200 mm/7.9 in) or very wide (a > 200 mm/7.9 in) sockets or an insufficient distance to the vessel wall or vessel installations (< 300 mm/11.81 in), we recommend carrying out a false echo suppression for the area in question. Use the adjustment software PACTware™ with DTM.

Inflowing medium
Make sure that the probe is not subjected to strong lateral forces. Mount VEGAFLEX at a position in the vessel where no mechanical disturbances, e.g. from filling openings, agitators, etc., can occur.

Type of vessel

Plastic vessel
The guided microwave principle requires a metal surface on the process fitting. Therefore use in plastic vessels etc. an instrument version with flange (from DN 50) or place a metal sheet (ø > 200 mm/8 in) beneath the process fitting when screwing it in.

Concrete vessel
When installed in thick concrete ceilings, VEGAFLEX should be mounted front flush to the lower edge. In concrete silos, the distance to the wall should be at least 500 mm (20 in).
Fixing

If there is a danger of the probe touching the vessel wall during operation due to product movements or agitators etc., the measuring probe should be securely fixed.

In the gravity weight there is a thread (M12), e.g. for a ring bolt (article no. 2.27424).

Make sure that the probe cable is not extremely taut. Avoid tensile loads on the cable. Use a slightly pre-stressed tension spring to fasten the cable. Also take note of the max. tensile load. The tensile load is specified in chapter "Technical data".

Avoid undefined cable-vessel connections, i.e. the connection must be either grounded reliably or isolated reliably. Any uncontrolled deviation from this requirement can lead to measurement errors.
4 Electrical connection

4.1 General prerequisites
The supply voltage range can differ depending on the instrument version. You can find exact specifications in chapter "Technical data".

The national installation standards as well as the valid safety regulations and accident prevention rules must be observed.

In hazardous areas you should take note of the appropriate regulations, conformity and type approval certificates of the sensors and power supply units.

4.2 Voltage supply
4 ... 20 mA/HART two-wire
Supply voltage and current signal are carried on the same two-wire cable. The requirements on the power supply are specified in chapter "Technical data".

The VEGA power supply units VEGATRENN 149AEx, VEGASTA 690, VEGADIS 371 as well as the VEGAMET signal conditioning instruments are suitable for power supply. When one of these instruments is used, a reliable separation of the supply circuit from the mains circuits according to DIN VDE 0106 part 101 and protection class II is ensured.

4 ... 20 mA/HART four-wire
Power supply and current output are carried on two separate connection cables.

The standard version can be operated with an earth-connected current output, the Exd version must be operated with a floating output.

The instrument is designed in protection class I. To maintain this protection class, it is absolutely necessary that the ground conductor be connected to the internal ground conductor terminal.

Profibus PA
Power is supplied by a Profibus DP/PA segment coupler or a VEGALOG 571 EP input card.

Fig. 8: Integration of instruments in a Profibus PA system via segment coupler DP/PA or data recording systems with Profibus PA input card

Foundation Fieldbus
Power supply via the H1 Fieldbus cable.

4.3 Connection cable
In general
The sensors are connected with standard cable without screen. An outer cable diameter of 5 ... 9 mm ensures the seal effect of the cable entry.

4 ... 20 mA/HART two-wire and four-wire
If electromagnetic interference is expected which is above the test values of EN 61326 for industrial areas, screened cable should be used. In HART multidrop mode the use of screened cable is generally recommended.

Profibus PA, Foundation Fieldbus
The installation must be carried out according to the appropriate bus specification. The sensor is connected respectively with screened cable according to the bus specification. Make sure that the bus is terminated via appropriate terminating resistors.

For power supply, an approved installation cable with PE conductor is also required.

In Ex applications, the corresponding installation regulations must be noted for the connection cable.

4.4 Connection of the cable screen and grounding
If screened cable is necessary, the cable screen must be connected on both ends to ground potential. If potential equalisation currents are expected, the connection on the evaluation side must be made via a ceramic capacitor (e.g. 1 nF, 1500 V).
Profibus PA, Foundation Fieldbus
In systems with potential separation, the cable screen is connected directly to ground potential on the power supply unit, in the connection box and directly on the sensor.

In systems without potential equalisation, connect the cable screen directly to ground potential only at the power supply unit and at the sensor - do not connect to ground potential in the connection box or T-distributor.

5 Operation

5.1 Overview
The sensors can be adjusted with the following adjustment media:
- with indicating and adjustment module
- an adjustment software according to FDT/DTM standard, e.g. PACTware™ and PC

and, depending on the signal output, also with:
- a HART handheld (4 … 20 mA/HART)
- The adjustment program AMS (4 … 20 mA/HART and Foundation Fieldbus)
- The adjustment program PDM (Profibus PA)
- a configuration tool (Foundation Fieldbus)

The entered parameters are generally saved in the sensor, optionally also in the indicating and adjustment module or in the adjustment program.

5.2 Compatibility according to NAMUR NE 53
VEGAFLEX meet NAMUR recommendation NE 53. VEGA instruments are generally upward and downward compatible:
- Sensor software to DTM VEGAFLEX HART, PA or FF
- DTM VEGAFLEX for adjustment software PACTware™
- Indicating and adjustment module PLICSCOM for sensor software

The parameter adjustment of the basic sensor functions is independent of the software version. The range of available functions depends on the respective software version of the individual components.

5.3 Adjustment with the indicating and adjustment module PLICSCOM
Setup and indication
PLICSCOM is a pluggable indication and adjustment module for plics® sensors. It can be placed in four different positions on the instrument (each displaced by 90°). Indication and adjustment are carried out via four keys and a clear, graphic-capable dot matrix display. The adjustment menu with language selection is clearly structured and enables easy setup. After setup, PLICSCOM serves as indicating instrument: through the screwed cover with glass insert, measured values can be read directly in the requested unit and presentation style.

The integrated background lighting of the display can be switched on via the adjustment menu.

  - interrupt input
  - jump to the next higher menu

5.4 Adjustment with PACTware™
PACTware™/DTM
Independent of the respective signal output 4 … 20 mA/HART, Profibus PA or Foundation Fieldbus, the sensors can be operated directly on the instrument via PACTware™. The sensors with signal output 4 … 20 mA/HART can be also operated via the HART signal on the signal cable.

An VEGACONNECT interface adapter as well as an instrument driver for the respective sensor is necessary for the adjustment with PACTware™. All currently available VEGA DTMs are included as DTM Collection with the current PACTware™ version on a CD. They are available for a protective fee from our respective VEGA agency. In addition, this DTM Collection incl. the basic version of PACTware™ can be downloaded free-of-charge from the Internet.

To use the entire range of functions of a DTM, incl. project documentation, a DTM licence is required for that particular instru-
ment family. This licence can be bought from the VEGA agency serving you.

**Connection of the PC via VEGACONNECT 3**

Guided microwave – Level measurement of bulk solids
## 6 Technical data

### General data

Material 316L corresponds to 1.4404 or 1.4435; 316 corresponds to 1.4401

**VEGAFLEX 61**

- Materials, wetted parts
  - Process fitting
  - Process seal on the instrument side (cable/rod leadthrough)
  - Process seal
  - Inner conductor (up to the separation cable/rod)
  - Rod: ø 6 mm (0.236 in)
  - Cable: ø 4 mm (0.157 in) with gravity weight (optional)

Material 316L and PCTFE, Hastelloy C22 (2.4602) and PCTFE
FKM (e.g. Viton), Kairez 6375, EPDM, FKM (e.g. Viton) FEP-coated
On site (instruments with thread: Klingsersil C-4400 is attached)

1.4462

316L/Hastelloy C22 (2.4602)

### VEGAFLEX 62

- Process fitting - cable version
  - Process fitting - rod version
  - Process seal on the instrument side (cable/rod leadthrough)
  - Process seal
  - Cable: ø 6 mm (0.236 in)
  - Rod: ø 16 mm (0.63 in)

Material 316L and PTFE
FKM (e.g. Viton), Kairez 6375, EPDM, FKM (e.g. Viton) FEP-coated
On site (instruments with thread: Klingsersil C-4400 is attached)

316L/Hastelloy C22 (2.4602)

### VEGAFLEX 66

- Materials, wetted parts - version -200 ... +400 °C (-328 ... +752 °F)
  - Process fitting with rod version
  - Process fitting with cable version
  - Rod: ø 16 mm (0.63 in)
  - Cable: ø 6 mm (0.236 in)
  - Process seal on the instrument side (cable/rod leadthrough)
  - Process seal

Material 316L, Hastelloy C22 (2.4602) and Aluminium oxide ceramic 99.7 %
Material 316L, Hastelloy C22 (2.4602) and Aluminium oxide ceramic 99.7 %
Material 316L
Material 316L

### Materials, non-wetted parts

- Housing
- Seal between housing and housing cover
- Inspection window in housing cover for PLICSCOM (optional)
- Ground terminal

Plastic PBT (polyester), Alu die-casting powder-coated, 316L
NBR (stainless steel housing), silicone (Alu/plastic housing)
Polycarbonate

316L

### Weight approx.

  - (200 ... +400 °C/-328 ... +752 °F)
  - Cable: ø 4 mm (0.157 in)
  - Cable: ø 6 mm (0.236 in)
  - Rod: ø 6 mm (0.236 in)
  - Rod: ø 16 mm (0.63 in)
  - Gravity weight (optional: ø 4 mm (0.157 in))
  - Gravity weight (optional: ø 6 mm (0.236 in))

Approx. 0.8 ... 8 kg (0.176 ... 17.64 lbs)
Approx. 6 ... 12 kg (13.23 ... 26.46 lbs)
80 g/m (0.86 oz/ft)
170 g/m (1.8 oz/ft)
220 g/m (2.365 oz/ft)
1600 g/m (17.2 oz/ft)
325 g (11.5 oz)
730 g (25.8 oz)
Lengths

Lengths (L)
- Cable: ø 4 mm (0.157 in) 1 ... 32 m (3.281 ... 104.99 ft)
- Cable: ø 6 mm (0.236 in) 1 ... 60 m (3.281 ... 196.86 ft)
- Trimming accuracy - cable ±0.05 %
- Rod: ø 6 mm (0.236 in) 0.3 ... 4 m (0.984 ... 13.12 ft)
- Rod: ø 16 mm (0.63 in) 0.3 ... 4 m (0.984 ... 13.12 ft)
- Trimming accuracy - rod < 1 mm (0.039 in)

Lateral load

Lateral load
- Rod: ø 6 mm (0.236 in) 4 Nm (3 lbf ft)
- Rod: ø 16 mm (0.63 in) 30 Nm (22 lbf ft)

Max. tensile load

Max. tensile load
- VEGAFLEX 61 - cable: ø 4 mm (0.157 in) 5 KN (1124 lbf)
- VEGAFLEX 62 - cable: ø 6 mm (0.236 in) 30 KN (6745 lbf)
- VEGAFLEX 66 - cable: ø 4 mm (0.157 in) 2.5 KN (562 lbf)

The tensile force of solids are subject of a normal fluctuation range. For this reason, the determined diagram value of the following diagrams must be multiplied with safety factor 2.

Fig. 16: Max. tensile load for VEGAFLEX 61 with cable: ø 4 mm (0.157 in)

- Kalrez 6375
  -20 … +150 °C (-4 … +302 °F)
- High temperature version (seal graphite)
  -200 … +400 °C (-328 … +752 °F)
Electromechanical data - version IP 66/IP 67 and IP 66/IP 68; 0.2 bar

Cable entry/plug³
- Single chamber housing
  - 1 x closing cap ½ NPT, 1 x blind plug ½ NPT
- Double chamber housing
  - 1 x closing cap ½ NPT, 1 x blind stopper ½ NPT, plug M12 x 1 for VEGADIS 61 (optional)
  - 1 x plug (depending on version), 1 x blind stopper ½ NPT; plug M12 x 1 for VEGADIS 61 (optional)

Spring-loaded terminals for wire cross-section up to 2.5 mm² (AWG 14)

Indicating and adjustment module
- Power supply and data transmission through the sensor
- Indication LC display in Dot matrix
- Adjustment elements 4 keys
- Protection
  - unassembled IP 20
  - mounted into the sensor without cover IP 40

Guided microwave – Level measurement of bulk solids
Materials
- Housing
- Inspection window

ABS
Polyester foil

Power supply VEGAFLEX - two-wire instrument

4 ... 20 mA/HART
Supply voltage
- Non-Ex instrument 14 ... 36 V DC
- EEx-ia instrument 14 ... 30 V DC
- EEx-d-ia instrument 20 ... 36 V DC

Permissible residual ripple
- < 100 Hz $U_{ss} < 1$ V
- 100 Hz ... 10 kHz $U_{ss} < 10$ mV

Load
- see diagram

Fig. 24: Voltage diagram
1 HART load
2 Voltage limit EEx-ia instrument
3 Voltage limit non-Ex/Exd instrument
4 Supply voltage

ProfiBus PA
Supply voltage
- Non-Ex instrument 9 ... 32 V DC
- EEx-ia instrument 9 ... 24 V DC

Power supply by max. number of sensors
- DP/PA segment coupler max. 32 (max. 10 with Ex)
- VEGALOG 571 EP card max. 15 (max. 10 with Ex)

Foundation Fieldbus
Supply voltage
- Non-Ex instrument 9 ... 32 V DC
- EEx-ia instrument 9 ... 24 V DC

Power supply by max. number of sensors
- H1 Fieldbus cable/Voltage supply max. 32 (max. 10 with Ex)

Power supply VEGAFLEX - four-wire instrument

4 ... 20 mA
Supply voltage
- Non-Ex and EEx-d instrument 20 ... 72 V DC, 20 ... 253 V AC, 50/60 Hz
Max. power consumption 4 VA; 2.1 W
