1 Description of the measuring principle

Measuring principle
High frequency microwave impulses are guided along a steel cable or rod or a rod inside a steel tube. When they reach the product surface, the microwave pulses are reflected and received by the processing electronics. The running time is processed by the instrument.

A microprocessor identifies these level echoes, which are subsequently measured by the ECHOFOX software, evaluated and converted into level information.

Time-consuming adjustment with medium is not necessary. The instruments are preset to the ordered probe length. The shortenable cable and rod versions can be adapted individually to the local requirements.

Insensitive to steam
Even process conditions such as intense vapor generation do not influence the measurement function.

Unaffected by material fluctuations
Density fluctuations or changes of the dielectric constant do not influence the function.

Buildup: no problem
Buildup or condensation on the probe or vessel wall do not influence the measuring result.

Wide application range
With measuring ranges up to 32 m (105 ft), the sensors are well suited for tall vessels. Temperatures up to 150 °C (302 °F) and pressures from vacuum up to 40 bar (580 psig) ensure a wide application range.

VEGAFLEX 66 is particularly suitable for the measurement of liquids with high process temperatures. Its mechanical configuration was specially optimised for such applications. With these high temperature versions, process temperatures from -200° to +400° C (-328 ... +752 °F) and pressures up to 400 bar (5800 psig) are possible.

1.1 Application examples

Storage vessels

![Fig. 1: Level measurement in a storage vessel with VEGAFLEX 61](image)

The guided microwave principle is suitable for level measurement in storage vessels. The sensor can be set up without filling or adjustment with medium.

The coax version is especially suitable for low viscosity liquids with low dielectric value. This also applies when the requirements on the accuracy of the measurement are very high.

Cable and rod probes are available for different lengths and loads.

The measurement is independent of product characteristics such as density, temperature, overpressure, foam, dielectric value and buildup.

Different, as well as frequently changing products and mixtures can be measured.
Food processing or pharmaceutical vessels

The fully PFA insulated VEGAFLEX 63 is ideal for level measurement in vessels in the food processing and pharmaceutical industries. The sensor can be set up without filling or adjustment with medium. Fully insulated rod probes are available up to 4 m (13 ft) and cable probes up to 32 m (105 ft).

The wetted parts are made of the food safe plastics PFA and TFM-PTFE.

The measurement is unaffected by product characteristics such as density, temperature or overpressure. Even foam and buildup do not influence the measurement.

Different, as well as frequently changing products and mixtures can be measured.

Standpipe or bypass

Standpipes or bypass tubes are often used in distillation columns, e.g. in the petrochemical industry. Also in this environment, measurement with guided microwaves has many advantages.

The configuration of the standpipe or bypass tube does not influence the measurement. Lateral tube connections, mixing holes, buildup or corrosion in the tube do not influence the measuring result.

Product temperatures up to 400 °C (752 °F) can be measured, up to 150 °C (302 °F) even with standard versions.

The sensor utilises nearly the entire vessel height, and can measure with high accuracy up to approx. 30 mm (1.181 in) below the process fitting. A possible overfilling even in this range is detected reliably.

VEGAFLEX sensors are also available with SIL2.

3 Mounting instructions

Measuring range
The reference plane for the measuring range of the sensors is the sealing surface of the thread or flange.

![Diagram](image)

Fig. 4: Measuring range (operating range) and max. measuring distance

1 full
2 empty (max. measuring distance)
3 Measuring range

Keep in mind that a min. distance must be maintained below the reference plane and possibly also at the end of the probe - measurement in these areas is not possible (dead band). Keep in mind that the cable length cannot be used all the way to the end because measurement in the area of the gravity weight is not possible. A possible overfilling however, is also detected reliably within the dead band.

These min. distances (dead zones) are specified in chapter "Technical data".

Pressure/Vacuum
The process fitting must be sealed if there is gauge or low pressure in the vessel. Before use, check if the seal material is resistant against the measured product. The max. permissible pressure is stated in chapter "Technical data" or on the type label of the sensor.

Installation position
Mount VEGAFLEX in such a way that the probe does not touch any installations or the vessel wall during operation. If necessary, fasten the probe end. If such an unsuitable installation location cannot be avoided, use a coax electrode - this sensor is not influenced by such installation conditions.

When mounting the cable and rod versions of VEGAFLEX keep at least a distance of 300 mm (11.81 in) to other vessel installations or to the vessel wall.

VEGAFLEX can also be mounted in a standpipe or bypass tube with an inner diameter of 25 mm (1 in). Make sure that the probe does not touch the tube during operation. VEGAFLEX sensors are the ideal replacement for displacer systems because they have no moving parts. Furthermore VEGAFLEX is unaffected by density fluctuations and is easy to install.

If possible, mount the sensor flush with the vessel top. If this is not possible, use short sockets with small diameter.

In case of unfavourable mounting conditions such as e.g. very high (h > 200 mm/7.9 in) or very wide (δ > 200 mm/7.9 in) sockets or a distance to the vessel wall or vessel installations of < 300 mm (11.81 in), we recommend carrying out a false echo storage for the area in question. Use the adjustment software PACTware™ with DTM. If such an installation location is necessary, use a coax probe. It is not influenced by unfavourable installation conditions.

Inflowing medium
Make sure that the probe is not subjected to strong lateral forces. Mount VEGAFLEX at a position in the vessel where no mechanical disturbances, e.g. from filling openings, agitators, etc., can occur.

![Diagram](image)

Fig. 5: Lateral load

Fixing
If there is a danger of the probe touching the vessel wall during operation due to product movements or agitators etc., the measuring probe should be securely fixed.

In the gravity weight there is a thread (M12), e.g. for a ring bolt (article no. 2.27424).

Make sure that the probe cable is not extremely taut. Avoid tensile loads on the cable. Use a slightly pre-stressed tension spring to fasten the cable.

Avoid undefined cable-vessel connections, i.e. the connection must be either grounded reliably or isolated reliably. Any uncontrolled deviation from this requirement can lead to measurement errors.
4 Electrical connection

4.1 General prerequisites
The supply voltage range can differ depending on the instrument version. You can find exact specifications in chapter "Technical data".

The national installation standards as well as the valid safety regulations and accident prevention rules must be observed.

In hazardous areas you should take note of the appropriate regulations, conformity and type approval certificates of the sensors and power supply units.

4.2 Voltage supply
4 … 20 mA/HART two-wire
Supply voltage and current signal are carried on the same two-wire cable. The requirements on the power supply are specified in chapter "Technical data".

The VEGA power supply units VEGATRENN 149AEx, VEGATRON 690, VEGADIS 371 as well as the VEGAMET signal conditioning instruments are suitable for power supply. When one of these instruments is used, a reliable separation of the supply circuit from the mains circuits according to DIN VDE 0106 part 101 and protection class II is ensured.

4 … 20 mA/HART four-wire
Power supply and current output are carried on two separate connection cables.

The standard version can be operated with an earth-connected current output, the Exd version must be operated with a floating output.

The instrument is designed in protection class I. To maintain this protection class, it is absolutely necessary that the ground conductor be connected to the internal ground conductor terminal.

Profibus PA
Power is supplied by a Profibus DP/PA segment coupler or a VEGALOG 571 EP input card.

4.3 Connection cable
In general
The sensors are connected with standard cable without screen. An outer cable diameter of 5 … 9 mm ensures the seal effect of the cable entry.

4 … 20 mA/HART two-wire and four-wire
If electromagnetic interference is expected which is above the test values of EN 61326 for industrial areas, screened cable should be used. In HART multidrop mode the use of screened cable is generally recommended.

Profibus PA, Foundation Fieldbus
The installation must be carried out according to the appropriate bus specification. The sensor is connected respectively with screened cable according to the bus specification. Make sure that the bus is terminated via appropriate terminating resistors.

For power supply, an approved installation cable with PE conductor is also required.

In Ex applications, the corresponding installation regulations must be noted for the connection cable.

4.4 Connection of the cable screen and grounding
If screened cable is necessary, the cable screen must be connected on both ends to ground potential. If potential equalisation currents are expected, the connection on the evaluation side must be made via a ceramic capacitor (e.g. 1 nF, 1500 V).
Profinet Fieldbus
In systems with potential separation, the cable screen is connected directly to ground potential on the power supply unit, in the connection box and directly on the sensor. In systems without potential equalisation, connect the cable screen directly to ground potential only at the power supply unit and at the sensor - do not connect to ground potential in the connection box or T-distributor.

5 Operation

5.1 Overview
The sensors can be adjusted with the following adjustment media:
- with indicating and adjustment module
- an adjustment software according to FDT/DTM standard, e.g. PACTware™ and PC

and, depending on the signal output, also with:
- a HART handheld (4 … 20 mA/HART)
- The adjustment program AMS (4 … 20 mA/HART and Foundation Fieldbus)
- The adjustment program PDM (Proﬁbus PA)
- a conﬁguration tool (Foundation Fieldbus)

The entered parameters are generally saved in the sensor, optionally also in the indicating and adjustment module or in the adjustment program.

5.2 Compatibility according to NAMUR NE 53
VEGAFLEX meet NAMUR recommendation NE 53. VEGA instruments are generally upward and downward compatible:
- Sensor software to DTM VEGAFLEX HART, PA or FF
- DTM VEGAFLEX for adjustment software PACTware™
- Indicating and adjustment module PLICSCOM for sensor software

The parameter adjustment of the basic sensor functions is independent of the software version. The range of available functions depends on the respective software version of the individual components.

5.3 Adjustment with the indicating and adjustment module PLICSCOM

Setup and indication
PLICSCOM is a pluggable indicating and adjustment module for plics® sensors. It can be placed in four different positions on the instrument (each displaced by 90°). Indication and adjustment are carried out via four keys and a clear, graphic-capable dot matrix display. The adjustment menu with language selection is clearly structured and enables easy setup. After setup, PLICSCOM serves as indicating instrument: through the screwed cover with glass insert, measured values can be read directly in the requested unit and presentation style.

The integrated background lighting of the display can be switched on via the adjustment menu.¹)

5.4 Adjustment with PACTware™
PACTware™/DTM
Independent of the respective signal output 4 … 20 mA/HART, Proﬁbus PA or Foundation Fieldbus, the sensors can be operated directly on the instrument via PACTware™. The sensors with signal output 4 … 20 mA/HART can be also operated via the HART signal on the signal cable.

An VEGACONNECT interface adapter as well as an instrument driver for the respective sensor is necessary for the adjustment with PACTware™. All currently available VEGA DTMs are included as DTM Collection with the current PACTware™ version on a CD. They are available for a protective fee from our respective VEGA agency. In addition, this DTM Collection incl. the basic version of PACTware™ can be downloaded free-of-charge from the Internet.

To use the entire range of functions of a DTM, incl. project documentation, a DTM licence is required for that particular instru-

¹) For instruments with national approvals such as e.g. according to FM or CSA only available at a later date.
ment family. This licence can be bought from the VEGA agency serving you.

**Connection of the PC via VEGACONNECT 3**

Instrument weight VEGAFLEX 66 (-200...+400°C/328...+752°F)

Weight
- Cable: ø 4 mm (0.157 in) 80 g/m (0.86 oz/ft)
- Cable: ø 6 mm (0.236 in) 170 g/m (1.8 oz/ft)
- Rod: ø 6 mm (0.236 in) 220 g/m (2.365 oz/ft)
- Rod: ø 10 mm (0.394 in) 620 g/m (6.7 oz/ft)
- Rod: ø 16 mm (0.63 in) 1600 g/m (17.2 oz/ft)
- Tube: ø 21.3 mm (0.839 in) 920 g/m (9.9 oz/ft)
- Tube: ø 43 mm (1.693 in) 3600 g/m (38.7 oz/ft)
- Gravity weight (optionally available) 325 g (11.5 oz)
- Gravity weight - VEGAFLEX 66 730 g (25.8 oz)

Lengths
Lengths (L)
- Cable: ø 4 mm (0.157 in) 1...32 m (3.281...104.99 ft)
- Cable: ø 6 mm (0.236 in) 1...60 m (3.281...196.85 ft)
- Trimming accuracy - cable ±0.05 %
- Rod: ø 6 mm (0.236 in) 0.3...4 m (0.984...13.12 ft)
- Rod: ø 10 mm (0.394 in) 0.3...4 m (0.984...13.12 ft)
- Rod: ø 16 mm (0.63 in) 0.3...6 m (0.984...19.69 ft)
- Trimming accuracy - rod < 1 mm (0.039 in)
- Tube: ø 21.3 mm (0.839 in) 0.3...6 m (0.984...19.69 ft)
- Tube: ø 43 mm (1.693 in) 0.3...6 m (0.984...19.69 ft)

Lateral load
Lateral load
- Rod: ø 6 mm (0.236 in) 4 Nm (3 lbf ft)
- Rod: ø 10 mm (0.394 in) 4 Nm (3 lbf ft)
- Rod: ø 16 mm (0.63 in) 30 Nm (22 lbf ft)
- Tube: ø 21.3 mm (0.839 in) 60 Nm (44 lbf ft)
- Tube: ø 43 mm (1.693 in) 100 Nm (73 lbf ft)

Max. tensile load
Max. tensile load
- VEGAFLEX 61 - cable: ø 4 mm (0.157 in) 5 KN (1124 lbf)
- VEGAFLEX 63 - cable: ø 4 mm (0.157 in) 2 KN (450 lbf)
- VEGAFLEX 66 - cable: ø 4 mm (0.157 in) 2.5 KN (562 lbf)
- VEGAFLEX 66 - cable: ø 6 mm (0.236 in) 10 KN (2248 lbf)

Output variable

4 ... 20 mA/HART
Output signal 4 ... 20 mA/HART
Signal resolution 1.6 µA
Fault message Current output unchanged 20.5 mA, 22 mA, < 3.6 mA (adjustable)
Max. output current 22 mA
Load
- 4 ... 20 mA/HART two-wire instrument
- 4 ... 20 mA/HART four-wire instrument
Damping (63 % of the input variable)
Fulfilled NAMUR recommendations

Profibus PA
Output signal
digital output signal, format according to IEEE-754
Sensor address
126 (default setting)
Current value
10 mA, ±0.5 mA
Integration time (63 % of the input variable)
0 ... 999 s, adjustable

Foundation Fieldbus
Output
digital output signal, Foundation Fieldbus protocol according to IEC 61158-2
Channel Numbers
- Channel 1 Primary Value
- Channel 2 Secondary Value 1
- Channel 3 Secondary Value 2
Transmission rate
31.25 Kbit/s
Current value
10 mA, ±0.5 mA
Integration time (63 % of the input variable)
0 ... 999 s, adjustable

Input variable
Parameter
Cable and rod version
Min. dielectric value with rod, cable version
εr > 1.6
Dead band with rod version
- top 80 mm (3.15 in)
- bottom 0 mm
Dead band with cable version
- top 150 mm (5.91 in)
- bottom 250 mm (9.843 in), gravity weight + 100 mm (3.937 in)

2) With inductive load ohmic share min. 25 Ω/mH.
Fig. 15: Measuring ranges of VEGAFLEX with cable and rod version e.g. VEGAFLEX 61

1 Reference plane
2 Probe length
3 Measuring range
4 Upper dead band
5 Lower dead band (only with cable version)

**Coax version**

- Min. dielectric value with coax version: $\varepsilon > 1.4$
- Dead band - coax version:
  - top: 30 mm (1.181 in)
  - bottom: 0 mm
Fig. 16: Measuring ranges of VEGAFLEX with coax version e.g. VEGAFLEX 65

1. Reference plane
2. Probe length
3. Measuring range
4. Upper dead band

Accuracy (similar to DIN EN 60770-1)

Reference conditions according to DIN EN 61298-1
- Temperature: +18 … +30 °C (+64 … +86 °F)
- Relative humidity: 45 … 75 %
- Air pressure: 860 … 1060 mbar/86 … 106 kPa (12.5 … 15.4 psig)

Deviation in characteristics and characteristics

Reference installation conditions
- Flange: DN 100
- Min. distance to installations (not with coax version): 500 mm (19.69 in)
- Min. distance to metal vessel bottom: 20 mm (0.787 in)
- Reference reflector: Metal plate: ø 1 m (3.281 ft)
- Temperature drift (current output): 0.06 %/10 K relating to the max. measuring range

Accuracy
- Cable version: ±3 mm (0.118 in)
- Rod version: ±3 mm (0.118 in)
- Coax version: ±3 mm (0.118 in)

Ambient conditions

Ambient, storage and transport temperature
- Standard version: -40 … +80 °C (-40 … +176 °F)
- Version IP 66/IP 68, 1 bar with connection cable PE: -20 … +60 °C (-4 … +140 °F)

Guided microwave – Level measurement in liquids
**Process conditions**

**VEGAFLEX 61, 65**

- **Process pressure**: -1 ... 40 bar/-100 ... 4000 kPa (-14.5 ... 580 psig), depending on the process fitting

- **Process temperature (thread or flange temperature)**
  - FKM (e.g. Viton): -40 ... +150 °C (-40 ... +302 °F)
  - FKM (e.g. Viton), FEP-coated: -40 ... +150 °C (-40 ... +302 °F)
  - EPDM: -40 ... +150 °C (-40 ... +302 °F)
  - Kalrez 6375: -20 ... +150 °C (-4 ... +302 °F)

**VEGAFLEX 63**

- **Process pressure**
  - Flange version ≤ 2”/DN 50: -0.5 ... 16 bar/-50 ... 1600 kPa (-7.3 ... 232 psig), depending on the process fitting
  - Flange version > 2”/DN 50: -0.2 ... 16 bar/-20 ... 1600 kPa (-2.9 ... 232 psig), depending on the process fitting

- **Process temperature (flange temperature)**: -40 ... +150 °C (-40 ... +302 °F)

**VEGAFLEX 66 (-20 ... +250 °C/-4 ... +482 °F)**

- **Process pressure**: -1 ... 100 bar/-100 ... 10000 kPa (-14.5 ... 1450 psig), depending on the process fitting

- **Process temperature**: -20 ... +250 °C (-4 ... +482 °F)
Fig. 19: Version -20 … +250 °C (-4 … +482 °F): in dependence on ambient temperature to product temperature

1 Ambient temperature
2 Product temperature (depending on the seal material)

VEGAFLEX 66 (-110 … +400 °C/-328 … +752 °F)
Not for steam pressure applications

Process pressure -1 … 160 bar/-100 … 16000 kPa (-14.5 … 2321 psig), depending on the process fitting

Process temperature (graphite seal) -110 … +400 °C (-166 … +752 °F)

Fig. 20: Version -110 … +400 °C (-166 … +752 °F): in dependence on ambient temperature to product temperature

1 Product temperature
2 Ambient temperature

VEGAFLEX 66 (-200 … +400 °C/-328 … +752 °F)

Process pressure -1 … 400 bar/-100 … 40000 kPa (-14.5 … 5800 psig), depending on the process fitting
Fig. 21: Version -200 … +400 °C (-328 … +752 °F): dependency process pressure to product temperature

1 Product temperature
2 Process pressure

Fig. 22: Version -200 … +400 °C (-328 … +752 °F): in dependence on ambient temperature to product temperature

1 Ambient temperature
2 Product temperature (depending on the seal material)

Electromechanical data - version IP 66/IP 67 and IP 66/IP 68; 0.2 bar

Cable entry/plug
- Single chamber housing
  - 1 x closing cap ½ NPT, 1 x blind plug ½ NPT
  - 1 x plug (depending on version), 1 x blind stopper ½ NPT
- Double chamber housing
  - 1 x closing cap ½ NPT, 1 x blind stopper ½ NPT, plug M12 x 1 for VEGADIS 61 (optional)
  - 1 x plug (depending on version), 1 x blind stopper ½ NPT; plug M12 x 1 for VEGADIS 61 (optional)

Spring-loaded terminals

for wire cross-section up to 2.5 mm² (AWG 14)

3) Depending on the version M12 x 1, according to DIN 43650, Harting, Amphenol-Tuchel, 7/8" FF; note plug protection.
Indicating and adjustment module

- Power supply and data transmission through the sensor
- Indication LC display in Dot matrix
- Adjustment elements 4 keys
- Protection
  - unassembled IP 20
  - mounted into the sensor without cover IP 40
- Materials
  - Housing ABS
  - Inspection window Polyester foil

Power supply VEGAFLEX - two-wire instrument

4 … 20 mA/HART

Supply voltage
- Non-Ex instrument 14 … 36 V DC
- EE-ia instrument 14 … 30 V DC
- EE-d-ia instrument 20 … 36 V DC

Permissible residual ripple
- < 100 Hz Uss < 1 V
- 100 Hz … 10 kHz Uss < 10 mV
Load see diagram

![Voltage diagram](image)

Fig. 23: Voltage diagram

1 HART load
2 Voltage limit EE-ia instrument
3 Voltage limit non-Ex/Exd instrument
4 Supply voltage

Profibus PA

Supply voltage
- Non-Ex instrument 9 … 32 V DC
- EE-ia instrument 9 … 24 V DC

Power supply by/max. number of sensors
- DP/PA segment coupler max. 32 (max. 10 with Ex)
- VEGALOG 571 EP card max. 15 (max. 10 with Ex)

Foundation Fieldbus

Supply voltage
- Non-Ex instrument 9 … 32 V DC
- EE-ia instrument 9 … 24 V DC

Power supply by/max. number of sensors
- H1 Fieldbus cable/Voltage supply max. 32 (max. 10 with Ex)
Power supply VEGAFLEX - four-wire instrument

4 … 20 mA
Supply voltage
- Non-Ex and EEx-d instrument 20 … 72 V DC, 20 … 253 V AC, 50/60 Hz
Max. power consumption 4 VA; 2.1 W

Electrical protective measures
Protection
- Plastic housing IP 66/IP 67
- Double chamber Alu-housing, four-wire instruments IP 66/IP 67
- Alu and stainless steel housing, two-wire instruments IP 66/IP 68 (0.2 bar)
- Alu and stainless steel housing optional, two-wire instruments IP 66/IP 68 (1 bar)
Overvoltage category III
Protection class
- two-wire, Proﬁbus PA, Foundation Fieldbus II
- four-wire I

Approvals
FM
FM Cl.I, Div2 (Ni) + Cl.II, III, Div1 (DIP)

FM Cl.I-III, Div 1 (IS) + Cl.I-III, Div 1 Gr.C-G(XP)
CSA
CSA Cl.I, Div2 (NI) + Cl.II, III, Div1 (DIP)
CSA Cl.I-III, Div 1 (IS)
CSA Cl.I-III, Div 1 (IS) + Div1, Gr C-G (XP)

CE conformity
EMVG (89/336/EWG), Emission: EN 61326: 1997 (class B),
LVD (73/23/EWG), EN 61010-1: 2001
NAMUR recommendation NE 21

Functional safety (SIL)
You can ﬁnd detailed information in the Safety Manual of VEGAFLEX or under www.vega.com.
Functional safety according to IEC 61508-4
- Single channel architecture (1oo1D) up to SIL2
- Double channel architecture (1oo2D) up to SIL3 (diversitary redundant)

Environmental instructions
VEGA environment management system certified according to DIN EN ISO 14001

---

4) A suitable cable is the prerequisite for maintaining the protection class.
5) Deviating data in Ex applications: see separate safety instructions.
6) not with VEGAFLEX 66
7) You can find detailed information under www.vega.com.
7 Dimensions

Housing in protection IP 66/IP 67 and IP 66/IP 68; 0.2 bar

## Product code

### VEGAFLEX 61

**Approval**
- UX: FM CL. I, Div II (NI) + CL. II, III, Div 1 (DIP)
- UF: FM CL. I, Div I (US)
- UG: FM CL. II, III, Div 1 (GI) + CL. II, III, Div 1 (GP)
- KX: CSA CL. I, Div II (NI) + CL. II, III, Div 1 (GP)
- KF: CSA CL. I-III, Div 1 (US)
- KG: CSA CL. I-III, Div 1 (GP) + CL. II, III, Div 1 (XP)

**Process connection / Material**
- NB: Thread ¾" NPT PN40 / 316L
- NC: Thread 1" NPT PN40 / 316L
- ND: Thread 1½" NPT PN40 / 316L
- AA: Flange 1" 150lb RF, ANSI B16.5 / 316L
- AE: Flange 2" 150lb RF, ANSI B16.5 / 316L
- AJ: Flange 3" 150lb RF, ANSI B16.5 / 316L
- AK: Flange 4" 150lb RF, ANSI B16.5 / 316L
- AM: Flange 6" 150lb RF, ANSI B16.5 / 316L

**Seal / Process temperature**
- FX61: KFKM (Viton) / -30...150°C
- FX62: Kalrez 6375 / -20...150°C
- FX63: EPDM / -40...150°C

**Electronics**
- H: Two-wire 4...20mA, HART®
- V: Four-wire 4...20mA, HART®
- P: Probus PA
- F: Foundation Fieldbus

**Housing / Protection**
- K: Plastic / IP66/IP67
- A: Aluminium / IP66/IP68 (0.2 bar)
- D: Aluminium double chamber / IP66/IP67
- V: Stainless steel 316L / IP66/IP68 (0.2 bar)

**Cable entry / Plug connection**
- N: ½" NPT / without
- X: Without
- A: Top mounted
- B: Side mounted

**Additional equipment**
- 1) Only in conjunction with Housing / Protection "D"

### VEGAFLEX 63

**Approval**
- UX: FM CL. I, Div II (NI) + CL. II, III, Div 1 (GP)
- UF: FM CL. I, Div I (US)
- UG: FM CL. II, III, Div 1 (GI) + CL. II, III, Div 1 (GP)
- KX: CSA CL. I, Div II (NI) + CL. II, III, Div 1 (GP)
- KF: CSA CL. I-III, Div 1 (US)
- KG: CSA CL. I-III, Div 1 (GP) + CL. II, III, Div 1 (XP)

**Process fitting / Material**
- AC: Flange 1½" 150lb RF, ANSI B16.5 / PTFE-plated
- AE: Flange 2" 150lb RF, ANSI B16.5 / PTFE-plated
- AF: Flange 2½" 300lb RF, ANSI B16.5 / PTFE-plated
- AI: Flange 3" 150lb RF, ANSI B16.5 / PTFE-plated
- AJ: Flange 3½" 300lb RF, ANSI B16.5 / PTFE-plated
- AK: Flange 4" 150lb RF, ANSI B16.5 / PTFE-plated
- AM: Flange 4½" 300lb RF, ANSI B16.5 / PTFE-plated
- AO: Flange 6" 300lb RF, ANSI B16.5 / PTFE-plated

**Electronics**
- H: Two-wire 4...20mA, HART®
- V: Four-wire 4...20mA, HART®
- P: Probus PA
- F: Foundation Fieldbus

**Housing / Protection**
- K: Plastic / IP66/IP67
- A: Aluminium / IP66/IP68 (0.2 bar)
- D: Aluminium double chamber / IP66/IP67
- V: Stainless steel 316L / IP66/IP68 (0.2 bar)

**Cable entry / Plug connection**
- N: ½" NPT / without
- X: Without
- A: Top mounted
- B: Laterally mounted

**Additional equipment**
- 1) Only in conjunction with Housing / Protection "D"
- 2) Not with approval "UG" or "K3"
