1 Description of the measuring principle

Measuring principle
Short ultrasonic pulses in the range of 18 kHz to 35 kHz are emitted by the transducer in the direction of the product, reflected by the product surface and received back by the transducer. The pulses travel at the speed of sound - the elapsed time from emission to reception of the signals depends on the level in the vessel.

The latest microcomputer technology and the proven ECHOFOXX software select the level echo from among any number of false echoes and calculate the exact distance to the product surface. An integrated temperature sensor detects the temperature in the vessel and compensates the influence of temperature on the signal running time.

By simply entering the vessel dimensions, a level-proportional signal is generated from the distance. It is not necessary to fill the vessel for the adjustment.

Wide application range
VEGASON 63, 64 and 65 ultrasonic sensors are especially suitable for level measurement of solids, but are also good for liquids. The instruments differ in their measuring range, transducer version and process fitting. Through different, adapted emitting frequencies and efficient transducers, levels in a measuring range of 15 ... 45 m (49.21 ... 147.64 ft) can be measured. Resistant materials for the transducers and process fittings also allow applications in corrosive products (depending on the model).

Versions for real-world applications
Adaptable sensors are necessary for the wide variety of product characteristics and installation conditions. VEGASON ultrasonic sensors meet this requirement with versions suitable for any working environment.

A practical mounting strap (optional) enables flexible orientation of VEGASON 63.

Four different versions of VEGASON 64 and 65 enable installation in practically any vessel and optimum alignment to the product cone:

- Version A: compact in flange version
- Version B: compact with swivelling holder
- Version C: separately with swivelling holder
- Version D: separately with thread

Independent of product properties
Fluctuations in product composition or even complete product changes do not influence the measuring result. A fresh adjustment is not necessary.

Service and maintenance friendly
Thanks to the non-contact measuring principle, VEGASON 63, 64 and 65 sensors are especially easy to service and maintain.

1.1 Application examples

Conveyor belt with sugar beets

![Fig. 1: Profile measurement on a conveyor belt with VEGASON 63](image)

The sugar beets used for sugar production are poured from trucks onto conveyor belts on which they are transported for further processing. VEGASON sensors are an economic solution for profile monitoring. Ultrasonic waves are reflected by the medium, the integrated electronics detects the charging height on the conveyor belt. By means of the mounting strap, VEGASON 63 can be optimally oriented to the medium. Thanks to its high emitting power, fog, wind and moisture do not affect measurement reliability.

Plastic granules

![Fig. 2: Level measurement in a plastic granules silo with VEGASON 64](image)

Plastic granules are often stored in high, narrow silos that are filled pneumatically. VEGASON ultrasonic sensors are particularly suitable for level measurement of plastic granules. They are equipped with powerful transducers and optimised signal processing. A swivelling holder on the mounting flange ensures optimum alignment to the product, also when material cones form.

2 Type overview

VEGASON 63

Preferred application: liquids and solids
Measuring range: Liquids: 0.6 ... 15 m (1.969 ... 49.21 ft)
                  Solids: 0.6 ... 7 m (1.969 ... 22.97 ft)
Process fitting: compression flange or mounting strap
Process temperature: -40 ... +80 °C (-40 ... +176 °F)
Process pressure: -0.2 ... 1 bar/-20 ... 100 kPa (-2.9 ... 14.5 psig)
Signal output: two-wire/four-wire 4 ... 20 mA/HART,
                two-wire Profinet, Foundation Fieldbus

VEGASON 64

Preferred application: Bulk solids
Measuring range: Liquids: 1 ... 25 m (3.281 ... 82.02 ft)
                  Bulk solids: 1 ... 15 m (3.281 ... 49.21 ft)
Process fitting: Flange
Process temperature: -40 ... +80 °C (-40 ... +176 °F)
Process pressure: -0.2 ... 1.5 bar/-20 ... 150 kPa (-2.9 ... 21.8 psig)
Signal output: Four-wire 4 ... 20 mA/HART, Profinet

VEGASON 65

Preferred application: Bulk solids
Measuring range: Liquids: 0.8 ... 45 m (2.624 ... 147.64 ft)
                  Bulk solids: 0.8 ... 25 m (2.624 ... 82.02 ft)
Process fitting: Flange
Process temperature: -40 ... +80 °C (-40 ... +176 °F)
Process pressure: -0.2 ... 1.5 bar/-20 ... 150 kPa (-2.9 ... 21.8 psig)
Signal output: Four-wire 4 ... 20 mA/HART, Profinet

3 Mounting instructions

Measuring range
The reference plane for the measurement depends on the version. For VEGASON 64 and 65 in flange version (version A) the lower edge of the flange is the reference plane. For the versions with swivelling holder (versions B and C), with threaded fitting (version D) as well as for VEGASON 63, the lower edge of the transducer is the reference plane. All statements concerning the measuring range as well as the internal signal evaluation relate to this plane.

With all instruments, a minimum distance from the lower edge of the flange - the so-called dead band, in which measurement is not possible - must be maintained. The exact value of the dead band, depending on the instrument version, is stated in chapter "Technical data".

![Fig. 3: Min. distance to the max. level, using VEGASON 63 as an example](image)

1 Dead band
2 Reference plane for the measurement

Note:
If the medium reaches the transducer, buildup can form on it and cause faulty measurements later on.

![Fig. 4: VEGASON 64 and 65 version A - Measuring range (operating range) and max. measuring distance](image)

1 full (dead band)
2 empty (max. measuring distance)
3 Measuring range
4 Reference plane

Pressure/Vacuum
Gauge pressure in the vessel does not influence VEGASON. Low pressure or vacuum does, however, damp the ultrasonic pulses. This influences the measuring result, particularly if the level is very low. With pressures under -0.2 bar (-20 kPa) you should use a different measuring principle, e.g. radar or guided microwave.

Mounting position
When mounting VEGASON 63, keep a distance of at least 200 mm (7.9 in) to the vessel wall, with VEGASON 64 and 65 at least 500 mm (19.7 in). If the sensor is installed in the center of dished or spherical vessel tops, multiple echoes can arise. These can, however, be faded out by an appropriate adjustment.

If you cannot keep this distance you should carry out a false echo storage before setup. This applies mainly if buildup on the vessel wall is expected. In this case, we recommend repeating a false echo storage later with existing buildup.

![Fig. 6: Mounting VEGASON 63 on round vessel tops](image)

1 Reference plane
2 Vessel center or symmetry axis
Mounting instructions

In vessels with conical bottom it can be advantageous to mount the sensor in the center of the vessel, as measurement is then possible down to the lowest point of the vessel bottom.

Sensor orientation
With liquids, align the sensor as close to vertical as possible to achieve optimum measuring results.

Vessel installations
The ultrasonic sensor should be installed at a location where no installations cross the ultrasonic beam.

If large vessel installations such as struts or supports cause false echoes, these can be attenuated through supplementary measures. Small, inclined sheet metal or plastic baffles above the installations scatter the ultrasonic signals and avoid direct false echoes.

Material heaps
Large material heaps are usually detected with several sensors, which can be mounted e.g. on traverse cranes. For this type of application, it is best to direct the sensor perpendicularly to the solid surface.

Inflowing medium
The instruments must not be mounted in or above the filling stream. Make sure that the product surface is detected, not the inflowing material.

Socket
The transducer without socket piece should preferably be mounted flush with the vessel top.

If the reflective properties of the medium are good, you can mount VEGASON on a socket piece higher than the transducer length. The socket end should be smooth and burr-free, if possible, also rounded. A false echo storage is recommended.
**Foam**
Through the action of filling, stirring and other processes in the vessel, dense foams which considerably damp the emitted signals may form on the product surface.

If foams cause measurement errors, the sensor should be used in a standpipe or, alternatively, the more suitable VEGAFLEX guided microwave sensors should be used.

Guided microwaves are unaffected by foam generation and are particularly suitable for such applications.

**Air turbulences**
If there are strong air currents in the vessel, e.g. due to strong winds over outdoor installations or air turbulence in the vessel, VEGASON should be mounted in a standpipe or you should use a different measuring principle, e.g. radar or guided radar (TDR).

**Heat fluctuations**
Strong heat fluctuations, e.g. caused by the sun, can cause measurement errors. In this case, you should use a sun shield.
4 Electrical connection

4.1 General requirements
The supply voltage range can differ depending on the instrument version. You can find exact specifications in chapter "Technical data".

The national installation standards as well as the valid safety regulations and accident prevention rules must be observed.

In hazardous areas you should take note of the appropriate regulations, conformity and type approval certificates of the sensors and power supply units.

4.2 Power supply
4 ... 20 mA/HART two-wire
The VEGA power supply units VEGATRENN 149AEx, VEGATAB 690, VEGADIS 371 as well as VEGAMET signal conditioning instruments are suitable for power supply. When one of these instruments is used, a reliable separation of the supply circuits from the mains circuits according to DIN VDE 0106 part 101 is ensured for the sensor.

4 ... 20 mA/HART four-wire
Power supply and current output are carried on two separate connection cables.

The standard version can be operated with an earth-connected current output, the Exd version must be operated with a floating output.

The instrument is designed in protection class I. To maintain this protection class, it is absolutely necessary that the ground conductor be connected to the internal ground conductor terminal.

Profibus PA four-wire
Power is supplied by a Profibus DP/PA segment coupler or a VEGALOG 571 EP input card. Profibus PA four-wire
The bus coupling is realised through a Profibus DP/PA segment coupler or a VEGALOG 571 EP input card. Power supply is provided via a separate connection cable.

Foundation Fieldbus two-wire
Power supply via the H1 Fieldbus cable.

Foundation Fieldbus four-wire
Bus coupling is provided via the H1 Fieldbus cable. Power supply via a separate connection cable.

4.3 Connection cable
General information
The sensors are connected with standard cable without screen. An outer cable diameter of 5 … 9 mm ensures the seal effect of the cable entry.

4 ... 20 mA/HART two-wire and four-wire
If electromagnetic interference is expected which is above the test values of EN 61326 for industrial areas, screened cable should be used. In HART multidrop mode the use of screened cable is generally recommended.

Profibus PA, Foundation Fieldbus
The installation must be carried out according to the appropriate bus specification. The sensor is connected respectively with screened cable according to the bus specification. Make sure that the bus is terminated via appropriate terminating resistors.

For power supply, an approved installation cable with PE conductor is also required.

In Ex applications, the corresponding installation regulations must be noted for the connection cable.

4.4 Connection of the cable screen and grounding
If screened cable is necessary, the cable screen must be connected on both ends to ground potential. If potential equalisation currents are expected, the connection on the evaluation side must be made via a ceramic capacitor (e.g. 1 nF, 1500 V).

Profibus PA, Foundation Fieldbus
In systems with potential separation, the cable screen is connected directly to ground potential on the power supply unit, in the connection box and directly on the sensor.

In systems without potential equalisation, connect the cable screen directly to ground potential only at the power supply unit and at the sensor - do not connect to ground potential in the connection box or T-distributor.

5 Operation

5.1 Overview
The sensors can be adjusted with the following adjustment media:
- with indicating and adjustment module
- an adjustment software according to FDT/DTM standard, e.g. PACTware and PC

and, depending on the signal output, also with:
- A HART handheld (4 … 20 mA/HART)
- The adjustment program AMS (4 … 20 mA/HART and Foundation Fieldbus)
- The adjustment program PDM (Profibus PA)
- A configuration tool (Foundation Fieldbus)

The entered parameters are generally saved in the sensor, optionally also in the indicating and adjustment module or in the adjustment program.

5.2 Adjustment with the indicating and adjustment module PLICSCOM

Setup and indication
PLICSCOM is a pluggable indication and adjustment module for plics® sensors. It can be placed in four different positions on the instrument (each displaced by 90°). Indication and adjustment are carried out via four keys and a clear, graphic-capable dot matrix display. The adjustment menu with language selection is clearly structured and enables easy setup. After setup, PLICSCOM serves as indicating instrument: through the screwed cover with glass insert, measured values can be read directly in the requested unit and presentation style.

The integrated background lighting of the display can be switched on via the adjustment menu.\(^1\)

PLICSCOM adjustment

- \([\rightarrow]\) key to select:
  - menu change
  - list entry
  - Select editing position

- \([+]\) key:
  - Change value of the parameter

- \([ESC]\) key:
  - interrupt input
  - jump to the next higher menu

5.3 Adjustment with PACTware

PACTware/DTM
Independent of the respective signal output 4 … 20 mA/HART, Profibus PA or Foundation Fieldbus, the sensors can be adjusted with PACTware directly on site. The sensors with signal output 4 … 20 mA/HART can be also operated via the HART signal on the signal cable.

A VEGACONNECT interface adapter as well as an instrument driver for the respective sensor is necessary for adjustment with PACTware. All currently available VEGA DTM are included in the DTM Collection with the current PACTware version on a CD. They can be purchased for a token fee from the responsible VEGA agency. In addition, this DTM Collection incl. the basic version of PACTware can be downloaded free of charge from the Internet.

To use the entire range of functions of a DTM, including project documentation, a DTM licence is required for that particular instrument family. This licence can be bought from the VEGA agency serving you.

Connection of the PC via VEGACONNECT

\(*\)

- Move to the menu overview
- Confirm selected menu
- Edit parameter
- Save value

\(^1\) For instruments with national approvals such as e.g. according to FM or CSA, only available at a later date.

2 I²C connection cable of VEGACONNECT
3 VEGACONNECT
4 USB cable to the PC

Necessary components:
- VEGASON
- PC with PACTware and suitable VEGA DTM
- VEGACONNECT
- Power supply unit or processing system

5.4 Adjustment with other adjustment programs

PDM
For VEGA Profibus PA sensors, instrument descriptions for the adjustment program PDM are available as EDD. The instrument descriptions are already implemented in the current version of PDM. For older versions of PDM, a free-of-charge download is available via Internet.

AMS
For VEGA Foundation Fieldbus sensors, instrument descriptions for the adjustment program AMS™ are available as DD. The instrument descriptions are already implemented in the current version of AMS™. For older versions of AMS™, a free-of-charge download is available via Internet.

- Non-Ex instrument 12 ... 32 V DC
- EEx-ia instrument 12 ... 24 V DC

Power supply by/max. number of sensors
- H1 Fieldbus cable/Voltage supply max. 32 (max. 10 with Ex)

**Power supply VEGASON 63 ... 65 - four-wire instrument**

Operating voltage
- Non-Ex and Ex-d instrument 20 ... 72 V DC, 20 ... 253 V AC, 50/60 Hz (with and without lighting of the indicating and adjustment module)

Max. power consumption 4 VA; 2.1 W

**Voltage supply Profibus PA - VEGASON 64, 65 - four-wire**

Operating voltage
- Non-Ex instrument 9 ... 32 V DC
- EEx-ia instrument 9 ... 24 V DC

Power supply by/max. number of sensors
- DP/PA segment coupler max. 32 (max. 10 with Ex)
- VEGALOG 571 EP card max. 15 (max. 10 with Ex)

**Voltage supply - Foundation Fieldbus - VEGASON 64, 65 - four-wire**

Operating voltage
- Non-Ex instrument 9 ... 32 V DC
- EEx-ia instrument 9 ... 24 V DC

Power supply by/max. number of sensors
- H1 power supply max. 32 (max. 10 with Ex)

**Electrical protective measures**

Protection
- Housing for VEGASON 63 IP 66/IP 68 (0.2 bar)\(^2\)
- Housing VEGASON 64 and 65 IP 66/IP 67
- Transducer IP 68
- Overvoltage category III

Protection class
- two-wire, Profibus PA, Foundation Fieldbus II
- four-wire I

---

\(^1\) Is available at a later date for instruments with StEx, WHG or ship approval as well as country-specific approvals such as those according to FM or CSA.

\(^2\) A suitable cable is the prerequisite for maintaining the housing protection class.
### Existing approvals or approvals applied for

- Dust-explosion protection: e.g. according to ATEX
- Ship approval: e.g. according to GL, LRS, ABS, RINA
- Functional safety: SIL 2 IEC 61508

The available approvals can be selected via the configurator on [www.vega.com](http://www.vega.com).

Depending on the version, instruments with approvals can have different technical data. For these instruments, please note the corresponding approval documents. They can be downloaded in the download section on [www.vega.com](http://www.vega.com).

7 Dimensions

Housing for VEGASON 63

Fig. 27: Housing versions (with integrated PLICSCOM, the housing height increases by 9 mm (9/64"))

1 Plastic housing
2 Stainless steel housing
3 Aluminium double chamber housing
4 Aluminium housing

VEGASON 63

Fig. 28: VEGASON, dimension L with Alu housing = 108 mm (4.252"), dimension L with plastic and stainless steel housing = 114.5 mm (4.508")

1 Mounting strap
2 Compression flange
3 Dead zone: 0.6 m (1.969 ft)
4 Measuring range: with liquids up to 15 m (49.21 ft), with solids up to 7 m (22.97 ft)

VEGASON 64

Fig. 29: VEGASON 64, the specification to the transducer diameter apply to standard/SEx

1 Version A
2 Version B
3 Dead zone: 1 m (3.281 ft)
4 Measuring range: with liquids up to 25 m (82.02 ft), with solids up to 15 m (49.21 ft)
**VEGASON 64**

1. Version C
2. Version D
3. Dead zone: 1 m (3.281 ft)
4. Measuring range: with liquids up to 25 m (82.02 ft), with solids up to 15 m (49.21 ft)

**VEGASON 65**

1. Version A
2. Version B
3. Dead zone: 1 m (3.281 ft)
4. Measuring range: with liquids up to 25 m (82.02 ft), with solids up to 15 m (49.21 ft)
VEGASON 65

Fig. 32: VEGASON 65

1. Version C
2. Version D
3. Dead zone: 0.8 m (2.624 ft)
4. Measuring range: with liquids up to 45 m (147.64 ft), with solids up to 25 m (82.02 ft)
## 8 Product code

### VEGASON 63

<table>

</table>

- **A**: Seal EPDM / -40...80°C
- **X**: without compression flange
- **C**: Mounting loop / 1/4NPT
- **E**: Compression flange ANSI 4" / 316L
- **D**: Compression flange ANSI 4" / PPH

**Electronics**
- **V**: Two-wire 4...20mA/HART®
- **P**: Profibus PA
- **F**: Foundation Fieldbus

**Housing / Protection**
- **K**: Plastic / IP66/IP67
  - **A**: Aluminium / IP66/IP68 (0.2 bar)
  - **D**: Aluminium double chamber / IP66/IP67
  - **V**: SST (precision casting) 316L / IP66/IP68 (0.2 bar)

**Cable entry / Plug connection**
- **N**: ½NPT / without
- **H**: Indicating/adjustment module (PLICSCOM)
- **X**: Without
- **A**: Top mounted
- **B**: Laterally mounted

**Additional equipment**
- **X**: without

1) Only available with Housing / Protection "D"

### VEGASON 65

<table>

</tbody>
</table>

- **A**: compact in flange version (version A) / -40...80°C
- **B**: compact with swivelling holder (version B) / -40...80°C
- **C**: separate with swivelling holder (version C) / -40...80°C
- **D**: separate with thread (version D) / -40...80°C

**Process connection / Material**
- **GS**: Thread G1A / galvanized steel
- **AS**: Swivelling holder with flange DN50/2" / galvanized St
- **BS**: Swivelling holder with flange DN80/3" / galvanized St
- **MA**: Flange 10" / Aluminium
- **MP**: Flange 10" / PP

**Electronics**
- **V**: Four wire 4...20mA/HART®
- **P**: Profibus PA
- **F**: Foundation Fieldbus

**Housing / Protection**
- **D**: Aluminium double chamber / IP66/IP67

**Cable entry / Plug connection**
- **N**: ½NPT / without
- **H**: Indicating/adjustment module (PLICSCOM)
- **X**: Without
- **A**: Top mounted

1) Only for Version / Process temperature "D"
2) Only for Version / Process temperature "B" and "C"
3) Only for Version / Process temperature "A"

### VEGASON 64
