VEGACAP 64
Two-wire

Capacitive rod electrode for level detection

Area of application
The VEGACAP 64 point level sensor for conductive liquids. The rod electrode is fully insulated and is suitable for viscous and adhesive products.

Advantages
- Reduced number of cleaning cycles through measurement insensitive to buildup
- Maximum use of the vessel, because measurement over the complete probe length
- Long lifetime and low maintenance requirement through robust construction

Function
Sensor and vessel form the two electrodes of a capacitor. A capacitance change caused by a level change is evaluated by the integrated electronics and converted into a switching signal. The capacitive measuring principle has no special requirements in respect to installation and mounting.

| Output signal | – Suitable signal conditioning VEGATOR 521, 527, 620, 621, 622 instruments
– Output signal | > 4 … < 20 mA (not standardised)
– Fault message | < 2.3 mA |
| Switching delay | 0.7 s (on/off) |

Materials
The wetted parts of the instrument are fully PTFE insulated. You will find a complete overview of the available materials and seals in the "configurator" on our homepage under www.vega.com/configurator.

Housing versions
The housings are available in plastic, stainless steel or Aluminium. They are available with protection ratings up to IP 67.

Electronics versions
The instruments are available in different electronics versions. Apart from the versions with transistor output, contactless electronic switch and relay output, a two-wire version for connection to a signal conditioning instrument is available.

Approvals
The instruments are suitable for use in hazardous areas and are approved e.g. according to ATEX and IEC. The instruments have also different ship approvals such as e.g. GL, LRS or ABS. You can find detailed information on the existing approvals in the "configurator" on our homepage under www.vega.com/configurator.
**Operation**

The mode and switching point of the limit switch are adjusted on the connected signal conditioning instrument.

**Electronics module - Two-wire output**

1. DIL switch for measuring range selection (with compensation button)
2. Ground terminal
3. Connection terminals
4. Control lamp

**Electrical connection**

Wiring plan

1. Voltage supply

You can find details on the electrical connection in the instrument operating instructions on our homepage at [www.vega.com/downloads](http://www.vega.com/downloads).

**Dimensions**

1. Threaded version
2. Flange version
3. Threaded version with temperature adapter
4. Active length (50 ... 200 mm)

**Instrument selection**

With the "finder" you can select the most suitable measuring principle for your application: [www.vega.com/finder](http://www.vega.com/finder). You can find detailed information on the instrument versions in the "configurator" on our homepage under [www.vega.com/configurator](http://www.vega.com/configurator).

**Contact**

You can find the VEGA agency serving your area on our homepage [www.vega.com](http://www.vega.com).

**Information**

You can find further information about the VEGA product line on our homepage [www.vega.com](http://www.vega.com). In the download section under [www.vega.com/downloads](http://www.vega.com/downloads) you'll find free operating instructions, product information, brochures, approval documents, instrument drawings and much, much more.
