VEGASWING 61
Relay (DPDT)

Vibrating level switch for liquids

Application area

The VEGASWING 61 is used as universal level switch in liquids. Independent of the installation position, it detects reliably and with millimetre precision when the level is reached.

The instrument can be used as empty or full detector, as approved overfill protection, dry run protection or pump protection in vessels and pipelines.

Advantages

- Setup without adjustment
- Product-independent switching point
- Very high reproducibility
- Wear and maintenance free
- SIL qualified

Function

Via the piezo drive, the tuning fork is energized to vibrate at its resonance frequency. When covered with medium, the frequency of the fork decreases. This frequency change is processed by the integrated electronics and converted into a switching command. To ensure a secure and reliable fastening of the piezo drive, an optimised screw connection is used.

Materials

The wetted parts of the instrument are made of stainless steel 316L. The supplied process seal is made of Klingsersil C-4400.

You will find a complete overview of the available materials and seals in the "configurator" on our homepage under www.vega.com/configurator.

Housing versions

The housings are available in plastic, stainless steel or Aluminium. They are available with protection ratings up to IP 67.

Electronics versions

The instruments are available in different electronics versions. Apart from the versions with transistor output, contactless electronic switch and relay output, a two-wire version for connection to a signal conditioning instrument and a NAMUR version are also available.

Approvals

The instruments are suitable for use in hazardous areas and are approved, e.g. according to ATEX, FM, CSA and IEC. The instruments also have different ship approvals such as e.g. GL, LRS or ABS and are approved as overfill protection according to WHG.

You can find detailed information on the existing approvals in the "configurator" on our homepage under www.vega.com/configurator.

Operation

The mode and sensitivity of the level switch can be adjusted on the electronics module. A signal lamp shows the switching status of the instrument.
Electronics and connection compartment, single chamber housing

1. Control lamp
2. DIL switch for mode adjustment
3. DIL switch for switching point adaptation
4. Ground terminal
5. Connection terminals

Electrical connection

You can find details on the electrical connection in the operating instructions of the instruments on our homepage under www.vega.com/downloads.

Dimensions

VEGASWING 61

1. Threaded version
2. Tri-Clamp version
3. Flange version

Information

You can find further information about the VEGA product line on our homepage www.vega.com.

In the download section under www.vega.com/downloads you'll find free operating instructions, product information, brochures, approval documents, instrument drawings and much, much more.

Instrument selection

With the "finder" you can select the most suitable measuring principle for your application: www.vega.com/finder.
