Materials

The process fitting is made of stainless steel 316L. The process diaphragm is available in 316L and in the high resistance materials Hastelloy C276, Tantalum as well as PTFE on 316Ti. You will find a complete overview of the available materials and seals in the "configurator" on our homepage under www.vega.com/configurator.

Housing versions

The housings are available as single chamber or double chamber version in plastic, stainless steel or aluminium. They are available in protection ratings up to IP 68 (25 bar) with external electronics.

Electronics versions

The instruments are available in different electronics versions. Apart from the two-wire electronics with 4 … 20 mA or 4 … 20 mA/HART, two purely digital versions with Profinet PA and Foundation Fieldbus are available.

Approvals

The instruments are suitable for use in hazardous areas and are approved e.g. according to ATEX and IEC. The instruments have also different ship approvals such as e.g. GL, LRS or ABS. You can find detailed information on the existing approvals in the "configurator" on our homepage under www.vega.com/configurator.

Area of application

The VEGABAR 51 is a pressure transmitter with chemical seal for pressure and level measurement. The chemical seals of the VEGABAR 51 adapted to the process ensure a reliable measurement even in highly corrosive and hot products.

Advantages

- Simple adaptation, thanks to versatile configuration
- Reliable measurement up to temperatures of 400 °C
- Reliable measurement independent of foam generation and tank installations

Function

The heart of the pressure transmitter is the pressure measuring cell transforming the pressure into an electrical signal. This pressure-dependent signal is converted by the integrated electronics into a standardized output signal. The metallic measuring cell allows fully welded versions and also covers higher measuring ranges. With measuring ranges up to 16 bar, a piezoresistive sensor element with internal transmission liquid is used. From 25 bar upwards, a strain gauge sensor element is used on the back side of the stainless steel diaphragm. This dry system works without additional isolating liquid.
### Operation

The adjustment of the instrument is carried out via the optional indicating and adjustment module PLICSCOM or via a PC with the adjustment software PACTware and corresponding DTM.

### Dimensions

Dimensions VEGABAR 51

1. Flange version 150 °C
2. Version with tube isolating diaphragm 150 °C

### Information

You can find further information about the VEGA product line on our homepage [www.vega.com](http://www.vega.com).

In the download section under [www.vega.com/downloads](http://www.vega.com/downloads) you’ll find free operating instructions, product information, brochures, approval documents, instrument drawings and much, much more.

There, you will also find GSD and EDD files for Proflbus PA systems as well as DD and CFF files for Foundation Fieldbus systems.

### Instrument selection

With the "finder" you can select the most suitable measuring principle for your application: [www.vega.com/finder](http://www.vega.com/finder).

You can find detailed information on the instrument versions in the "configurator" on our homepage under [www.vega.com/configurator](http://www.vega.com/configurator).

### Contact

You can find the VEGA agency serving your area on our homepage [www.vega.com](http://www.vega.com).

### Electrical connection

Electronics and connection compartment, single chamber housing

1. Spring-loaded terminals for voltage supply
2. Ground terminal for connection of the cable screen

You can find details on the electrical connection in the instrument operating instructions on our homepage at [www.vega.com/downloads](http://www.vega.com/downloads).
