

Systems Integration and Field Service

Process Control Systems

AC Technical Services (ACTS) offers a robust process control experience. If your application demands real-time plant data tracking and feedback, we have a solution. Our custom control systems can be configured to monitor and manipulate a variety of mechanisms to ensure safe, reliable operation.

Plant Optimization

ACTS has extensive experience in Chiller and Boiler plant optimization. We have been tuning Boilers and Chillers for over 50 years. Our technicians have factory training in combustion and chiller plant controls. Working together with our clients ensures their Boilers, Furnaces, and Chillers operate safely and efficiently.

Support and Repair

We offer 24-hour service. Our technicians are located throughout the Southeast for emergency on-site assistance, minimizing client downtime. Our extensive parts inventory allows us to quickly replace damaged products and restore service.

ACTS also offers maintenance and service contracts. Service contracts guarantee priority, reducing emergency response time. Routine maintenance performed under service contracts prevents shut-downs and increases efficiency.

Calibration

Testing and calibration increase product longevity and performance. Our trained technicians can perform on-site calibration using certified test equipment and industry best practices. A complete record of the calibration is provided to each client for future reference.

Our History

ACTS has over 50 years of experience in process and utility plant control systems. We specialize in Systems Integration Services, Combustion and Process Control Systems, and distribution and repair of industrial instrumentation throughout the Southeast. We are committed to providing clients with superior service and reliable products. Our goal is to keep each clients' operation running at maximum efficiency.
